

If the flagged items do not appear to be text

If items relate to a ... * well-formed pattern.

If you can write a pattern that would match it, try adding it to the `patterns.txt` file.

Patterns are Perl 5 Regular Expressions - you can test yours before committing to verify it will match your lines.

Note that patterns can't match multiline strings.

- binary file.

Please add a file path to the `excludes.txt` file matching the containing file.

File paths are Perl 5 Regular Expressions - you can test yours before committing to verify it will match your files.

`^` refers to the file's path from the root of the repository, so `^README\.md$` would exclude `README.md` (on whichever branch you're using).
