

# OAuth2 for Go

oauth2 package contains a client implementation for OAuth 2.0 spec.

## Installation

```
go get golang.org/x/oauth2
```

Or you can manually git clone the repository to `$(go env GOPATH)/src/golang.org/x/oauth2`.

See [pkg.go.dev](https://pkg.go.dev/golang.org/x/oauth2) for further documentation and examples.

- [pkg.go.dev/golang.org/x/oauth2](https://pkg.go.dev/golang.org/x/oauth2)
- [pkg.go.dev/golang.org/x/oauth2/google](https://pkg.go.dev/golang.org/x/oauth2/google)

## Policy for new packages

We no longer accept new provider-specific packages in this repo if all they do is add a single endpoint variable. If you just want to add a single endpoint, add it to the [pkg.go.dev/golang.org/x/oauth2/endpoints](https://pkg.go.dev/golang.org/x/oauth2/endpoints) package.

## Report Issues / Send Patches

This repository uses Gerrit for code changes. To learn how to submit changes to this repository, see <https://golang.org/doc/contribute.html>.

The main issue tracker for the oauth2 repository is located at <https://github.com/golang/oauth2/issues>.
