

Home > puppeteer > EventEmitter > on

## EventEmitter.on() method

Bind an event listener to fire when an event occurs.

Signature:

```
on(event: EventType, handler: Handler): EventEmitter;
```

### Parameters

| Parameter | Type      | Description  |
|-----------|-----------|--|
| event     | EventType | the event type you'd like to listen to. Can be a string or symbol. |
| handler   | Handler   | the function to be called when the event occurs.                   |

Returns:

EventEmitter

**this** to enable you to chain method calls.
