

zh-CN

增加选择时间功能，当 `showTime` 为一个对象时，其属性会传递给内建的 `TimePicker`。

en-US

This property provide an additional time selection. When `showTime` is an Object, its properties will be passed on to built-in `TimePicker`.

```
import { DatePicker, Space } from 'antd';

const { RangePicker } = DatePicker;

function onChange(value, dateString) {
  console.log('Selected Time: ', value);
  console.log('Formatted Selected Time: ', dateString);
}

function onOk(value) {
  console.log('onOk: ', value);
}

export default () => (
  <Space direction="vertical" size={12}>
    <DatePicker showTime onChange={onChange} onOk={onOk} />
    <RangePicker
      showTime={{ format: 'HH:mm' }}
      format="YYYY-MM-DD HH:mm"
      onChange={onChange}
      onOk={onOk}
    />
  </Space>
);
```
