Description

Subscribe or unsubscribe V4L2 event. Subscribed events are dequeued by using the [:ref:VIDIOC_DQEVENT](#) ioctl.

   * - u32
     - ``type``
     - Type of the event, see :ref:`event-type`.

     .. note::

        ``V4L2_EVENT_ALL`` can be used with
        :ref:`VIDIOC_UNSUBSCRIBE_EVENT` <VIDIOC_SUBSCRIBE_EVENT>` for
        unsubscribing all events at once.

   * - u32
     - ``id``
     - ID of the event source. If there is no ID associated with the
       event source, then set this to 0. Whether or not an event needs an
       ID depends on the event type.

   * - u32
     - ``flags``
     - Event flags, see :ref:`event-flags`.

   * - u32
     - ``reserved`` [5]
     - Reserved for future extensions. Drivers and applications must set
       the array to zero.

* - ``V4L2_EVENT_SUB_FL_SEND_INITIAL``
  - 0x0001
  - When this event is subscribed an initial event will be sent
    containing the current status. This only makes sense for events
    that are triggered by a status change such as ``V4L2_EVENT_CTRL``.
    Other events will ignore this flag.
* - ``V4L2_EVENT_SUB_FL_ALLOW_FEEDBACK``
  - 0x0002
  - If set, then events directly caused by an ioctl will also be sent
    to the filehandle that called that ioctl. For example, changing a
    control using :ref:`VIDIOC_S_CTRL <VIDIOC_G_CTRL>` will cause
    a V4L2_EVENT_CTRL to be sent back to that same filehandle.
    Normally such events are suppressed to prevent feedback loops
    where an application changes a control to a one value and then
    another, and then receives an event telling it that that control
    has changed to the first value.

    Since it can't tell whether that event was caused by another
    application or by the :ref:`VIDIOC_S_CTRL <VIDIOC_G_CTRL>`
    call it is hard to decide whether to set the control to the value
    in the event, or ignore it.

    Think carefully when you set this flag so you won't get into
    situations like that.
```

Return Value

On success 0 is returned, on error -1 and the `errno` variable is set appropriately. The generic error codes are described at the [ref:Generic Error Codes <gen-errors>](#) chapter.
