

[Home](#) > [puppeteer](#) > [JSHandle](#) > [jsonValue](#)

## JSHandle.jsonValue() method

### Signature:

```
jsonValue<T = unknown>(): Promise<T>;
```

### Returns:

Promise<T>

Returns a JSON representation of the object. If the object has a `toJSON` function, it will not be called.

## Remarks

The JSON is generated by running [JSON.stringify](#) on the object in page and consequent [JSON.parse](#) in puppeteer.

**\*\*NOTE\*\*** The method throws if the referenced object is not stringifiable.
