

Chromium inspector (devtools) protocol

This package contains code generators and templates for the Chromium inspector protocol.

The canonical location of this package is at https://chromium.googlesource.com/deps/inspector_protocol/

In the Chromium tree, it's rolled into https://cs.chromium.org/chromium/src/third_party/inspector_protocol/

In the V8 tree, it's rolled into https://cs.chromium.org/chromium/src/v8/third_party/inspector_protocol/

See also [Contributing to Chrome Devtools Protocol](#).

We're working on enabling standalone builds for parts of this package for testing and development, please feel free to ignore this for now. But, if you're familiar with [Chromium's development process](#) and have the depot_tools installed, you may use these commands to fetch the package (and dependencies) and build and run the tests:

```
fetch inspector_protocol
cd src
gn gen out/Release
ninja -C out/Release json_parser_test
out/Release/json_parser_test
```

You'll probably also need to install g++, since Clang uses this to find the standard C++ headers. E.g.,

```
sudo apt-get install g++-8
```
