

MDX Benchmark

Benchmark for MDX pages. Mock data is generated during the dependency installation step. The number of pages generated is read from `NUM_PAGES=` (defaults to 512).

```
$ export NUM_PAGES=1024
$ yarn install      # or npm install
$ gatsby build     # or npm run build
```

This will not use an external source for data while building, but will download some remote images while installing.
