

Note: this error code is no longer emitted by the compiler. A clobber was surrounded by braces in the `llvm_asm` macro.

Erroneous code example:

```
ignore (no longer emitted) llvm_asm!("mov $$0x200, %eax"           :  
:                               : "{eax}"                          );
```
