

## **gatsby-plugin-manifest performance tests**

- Setup: yarn
- Run: yarn bench

Benchmarks the current production version of the plugin unless you use gatsby-dev.

### **To benchmark the current branch:**

```
# In the root of the Gatsby repository
yarn run watch --scope=gatsby-plugin-manifest .

# In ./benchmarks/plugin-manifest
# You'll need 'gatsby-dev' installed and configured globally.
gatsby-dev --packages gatsby-plugin-manifest
```

You may now switch branches using `git checkout` and edit code on the current branch. Changes will be compiled into the local `node_modules` for the benchmark.
