[unist](#) utility to pretty print the positional information of a node.

Install

[npm](#):

```
npm install unist-util-stringify-position
```

Use

```
var stringify = require('unist-util-stringify-position')

// Point
stringify({line: 2, column: 3}) // => '2:3'

// Position
stringify({start: {line: 2}, end: {line: 3}}) // => '2:1-3:1'

// Node
stringify({
  type: 'text',
  value: '!',
  position: {
    start: {line: 5, column: 11},
    end: {line: 5, column: 12}
  }
}) // => '5:11-5:12'
```

API

stringifyPosition(node|position|point)

Stringify one [point](#), a [position](#) (start and end [points](#)), or a node's [positional information](#).

PARAMETERS

- `node` ([Node](#)) — Node whose `'position'` property to stringify
- `position` ([Position](#)) — Position whose `'start'` and `'end'` points to stringify
- `point` ([Point](#)) — Point whose `'line'` and `'column'` to stringify

RETURNS

`string?` — A range `ls:cs-le:ce` (when given `node` or `position`) or a point `l:c` (when given `point`), where `l` stands for line, `c` for column, `s` for start, and `e` for end. An empty string (`''`) is returned if the given value is neither `node`, `position`, nor `point`.
