

## Invalid Multi-match

**Why This Error Occurred** In one of your custom-routes you specified a multi-match `/:path*` and used it in your `destination` without adding the `*` in your destination e.g. `destination: '/another/:path'`

**Possible Ways to Fix It** Add `*` to your usage of the multi-match param in your destination.

**Before**

```
{
  source: '/:path*',
  destination: '/another/:path'
}
```

**After**

```
{
  source: '/:path*',
  destination: '/another/:path*'
}
```
