

Apollo & Redux Example

This example serves as a conduit if you were using Apollo 1.X with Redux, and are migrating to Apollo 3.x, however, you have chosen not to manage your entire application state within Apollo (`apollo-link-state`).

In 3.0.0, Apollo serves out-of-the-box support for redux in favor of Apollo's state management. This example aims to be an amalgamation of the [with-apollo](#) and [with-redux](#) examples.

To inspect the GraphQL API, use its [web IDE](#).

Deploy your own

Deploy the example using [Vercel](#):

How to use

Execute [create-next-app](#) with [npm](#) or [Yarn](#) to bootstrap the example:

```
npx create-next-app --example with-apollo-and-redux with-apollo-and-redux-app
# or
yarn create next-app --example with-apollo-and-redux with-apollo-and-redux-app
# or
pnpm create next-app -- --example with-apollo-and-redux with-apollo-and-redux-app
```

Deploy it to the cloud with [Vercel](#) ([Documentation](#)).
