

Button group

The ButtonGroup component can be used to group related buttons.

```
{{"component": "modules/components/ComponentLinkHeader.js"}}
```

Basic button group

The buttons can be grouped by wrapping them with the `ButtonGroup` component. They need to be immediate children.

```
{{"demo": "BasicButtonGroup.js"}}
```

Button variants

All the standard button variants are supported.

```
{{"demo": "VariantButtonGroup.js"}}
```

Sizes and colors

The `size` and `color` props can be used to control the appearance of the button group.

```
{{"demo": "GroupSizesColors.js"}}
```

Vertical group

The button group can be displayed vertically using the `orientation` prop.

```
{{"demo": "GroupOrientation.js"}}
```

Split button

`ButtonGroup` can also be used to create a split button. The dropdown can change the button action (as in this example) or be used to immediately trigger a related action.

```
{{"demo": "SplitButton.js"}}
```

Disabled elevation

You can remove the elevation with the `disableElevation` prop.

```
{{"demo": "DisableElevation.js"}}
```
