

# Data fetch example

Next.js was conceived to make it easy to create universal apps. That's why fetching data on the server and the client when necessary is so easy with Next.js.

By using `getStaticProps` Next.js will fetch data at build time from a page, and pre-render the page to static assets.

## Deploy your own

Deploy the example using [Vercel](#) or preview live with [StackBlitz](#)

## How to use

Execute [create-next-app](#) with [npm](#) or [Yarn](#) to bootstrap the example:

```
npx create-next-app --example data-fetch data-fetch-app
# or
yarn create next-app --example data-fetch data-fetch-app
# or
pnpm create next-app -- --example data-fetch data-fetch-app
```

Deploy it to the cloud with [Vercel](#) ([Documentation](#)).
