

# Example app with styled-components

[Orbit-components](#) is a React component library which provides developers with the easiest possible way of building Kiwi.com's products.

For this purpose we are extending `<App />` of injected `<ThemeProvider/>` , and also adding `@kiwicom/babel-plugin-orbit-components` .

This fork comes from [styled-components-example](#).

## Deploy your own

Deploy the example using [Vercel](#) or preview live with [StackBlitz](#)

## How to use

Execute [create-next-app](#) with [npm](#) or [Yarn](#) to bootstrap the example:

```
npx create-next-app --example with-orbit-components with-orbit-components-app
# or
yarn create next-app --example with-orbit-components with-orbit-components-app
# or
pnpm create next-app -- --example with-orbit-components with-orbit-components-app
```

Deploy it to the cloud with [Vercel](#) ([Documentation](#)).
