

build **passing**

This repo is forked from the dormant upstream repo at [hpccloud](#). This fork adds support for go modules, updates the dependencies, adds features and fixes bugs. Go 1.9 is the oldest compiler release supported.

Go package for tail-ing files

A Go package striving to emulate the features of the BSD `tail` program.

```
t, err := tail.TailFile("/var/log/nginx.log", tail.Config{Follow: true})
if err != nil {
    panic(err)
}

for line := range t.Lines {
    fmt.Println(line.Text)
}
```

See [API documentation](#).

Log rotation

Tail comes with full support for truncation/move detection as it is designed to work with log rotation tools.

Installing

```
go get github.com/nxadm/tail/...
```

Windows support

This package [needs assistance](#) for full Windows support.
