

next/script components with inline content require an `id` attribute

Why This Error Occurred

`next/script` components with inline content require an `id` attribute to be defined to track and optimize the script.

Possible Ways to Fix It

Add an `id` attribute to the `next/script` component.

```
import Script from 'next/script'

export default function App({ Component, pageProps }) {
  return (
    <>
      <Script id="my-script">`console.log('Hello world!');`</Script>
      <Component {...pageProps} />
    </>
  )
}
```
