

example.js

This example illustrates how to filter the ContextModule results of `import()` statements. Only `.js` files that don't end in `.noimport.js` within the `templates` folder will be bundled.

```
_{{example.js}}_
```

templates/

- `foo.js`
- `foo.noimport.js`
- `baz.js`
- `foo.noimport.js`
- `bar.js`
- `foo.noimport.js`

All templates are of this pattern:

```
_{{templates/foo.js}}_
```

dist/output.js

```
_{{dist/output.js}}_
```

Info

Unoptimized

```
_{{stdout}}_
```

Production mode

```
_{{production:stdout}}_
```
