

Contributing

Logr is open to pull-requests, provided they fit within the intended scope of the project. Specifically, this library aims to be VERY small and minimalist, with no external dependencies.

Compatibility

This project intends to follow [semantic versioning](#) and is very strict about compatibility. Any proposed changes MUST follow those rules.

Performance

As a logging library, logr must be as light-weight as possible. Any proposed code change must include results of running the [benchmark](#) before and after the change.
