

Flutter plugin

The Flutter plugin provides completion and useful aliases

To use it, add `flutter` to the plugins array of your `zshrc` file:

```
plugins=(... flutter)
```

Aliases

Alias	Command	Description
<code>fl</code>	<code>flutter</code>	Shorthand for flutter command
<code>flattach</code>	<code>flutter attach</code>	Attaches flutter to a running flutter application with enabled observatory
<code>flb</code>	<code>flutter build</code>	Build flutter application
<code>flchnl</code>	<code>flutter channel</code>	Switches flutter channel (requires input of desired channel)
<code>flc</code>	<code>flutter clean</code>	Cleans flutter project
<code>fldvcs</code>	<code>flutter devices</code>	List connected devices (if any)
<code>fldoc</code>	<code>flutter doctor</code>	Runs flutter doctor
<code>flpub</code>	<code>flutter pub</code>	Shorthand for flutter pub command
<code>flget</code>	<code>flutter pub get</code>	Installs dependencies
<code>flr</code>	<code>flutter run</code>	Runs flutter app
<code>flrd</code>	<code>flutter run --debug</code>	Runs flutter app in debug mode (default mode)
<code>flrp</code>	<code>flutter run --profile</code>	Runs flutter app in profile mode
<code>flrr</code>	<code>flutter run --release</code>	Runs flutter app in release mode
<code>flupgrd</code>	<code>flutter upgrade</code>	Upgrades flutter version depending on the current channel
