

## Conflicting Public File and Page File

**Why This Error Occurred** One of your public files has the exact same path as a page file which is not supported. Since only one resource can reside at the URL both public files and page files must be unique.

**Possible Ways to Fix It** Rename either the public file or page file that is causing the conflict.

Example conflict between public file and page file

```
public/  
  hello  
pages/  
  hello.js
```

Non-conflicting public file and page file

```
public/  
  hello.txt  
pages/  
  hello.js
```
