

## zh-CN

带搜索框的穿梭框，可以自定义搜索函数。

## en-US

Transfer with a search box.

```
import { Transfer } from 'antd';

class App extends React.Component {
  state = {
    mockData: [],
    targetKeys: [],
  };

  componentDidMount() {
    this.getMock();
  }

  getMock = () => {
    const targetKeys = [];
    const mockData = [];
    for (let i = 0; i < 20; i++) {
      const data = {
        key: i.toString(),
        title: `content${i + 1}`,
        description: `description of content${i + 1}`,
        chosen: Math.random() * 2 > 1,
      };
      if (data.chosen) {
        targetKeys.push(data.key);
      }
      mockData.push(data);
    }
    this.setState({ mockData, targetKeys });
  };

  filterOption = (inputValue, option) => option.description.indexOf(inputValue) >
-1;

  handleChange = targetKeys => {
    this.setState({ targetKeys });
  };

  handleSearch = (dir, value) => {
    console.log('search:', dir, value);
  };

  render() {
    return (
```

```
    <Transfer
      dataSource={this.state.mockData}
      showSearch
      filterOption={this.filterOption}
      targetKeys={this.state.targetKeys}
      onChange={this.handleChange}
      onSearch={this.handleSearch}
      render={item => item.title}
    />
  );
}
}

export default () => <App />;
```
