

Home > puppeteer > Page > createPDFStream

Page.createPDFStream() method

Generates a PDF of the page with the **print** CSS media type.

Signature:

```
createPDFStream(options?: PDFOptions): Promise<Readable>;
```

Parameters

Parameter	Type	Description
options	PDFOptions	options for generating the PDF.

Returns:

Promise<Readable>

Remarks

NOTE: PDF generation is only supported in Chrome headless mode.

To generate a PDF with the **screen** media type, call `page.emulateMediaType('screen')` before calling `page.pdf()`.

By default, `page.pdf()` generates a pdf with modified colors for printing. Use the `'-webkit-print-color-adjust'` property to force rendering of exact colors.
