

zh-CN

通过 `visible` 属性控制关闭状态。

en-US

By using the `visible` prop, you can control the close state of Tag.

```
import { Tag, Button } from 'antd';

class Demo extends React.Component {
  state = {
    visible: true,
  };

  render() {
    return (
      <>
        <Tag
          closable
          visible={this.state.visible}
          onClose={() => this.setState({ visible: false })}
        >
          Movies
        </Tag>
        <br />
        <Button size="small" onClick={() => this.setState({ visible:
!this.state.visible })}>
          Toggle
        </Button>
      </>
    );
  }
}

export default () => <Demo />;
```
