

Swift Package Manager

Description

This plugin provides a few utilities that make you faster on your daily work with the Swift Package Manager, as well as autocompletion for Swift 5.1.

To start using it, add the `swiftpm` plugin to your `plugins` array in `~/.zshrc`:

```
plugins=(... swiftpm)
```

Aliases

Alias	Description	Command
<code>spi</code>	Initialize a new package	<code>swift package init</code>
<code>spf</code>	Fetch package dependencies	<code>swift package fetch</code>
<code>spu</code>	Update package dependencies	<code>swift package update</code>
<code>spx</code>	Generates an Xcode project	<code>swift package generate-xcodeproj</code>
<code>sps</code>	Print the resolved dependency graph	<code>swift package show-dependencies</code>
<code>spd</code>	Print parsed Package.swift as JSON	<code>swift package dump-package</code>
