

Baseline Gatsby Benchmark: csv + markdown

This is a baseline benchmark site in the Gabe project.

This site in particular tracks Markdown performance when sourcing from a single CSV file.

The site can generate an arbitrary amount of super simple pages. Each page has a small header, a quote, and two small paragraphs of random text. No images, because we want to benchmark Markdown.

Install

Run `yarn` or `npm install`

Usage

You can start a benchmark run like this:

`N=1000 M=2 yarn bench`

- `N=1000`: instructs the run to build a site of 1000 pages
- `M=2`: instructs nodejs to use up to 2gb of memory for its long term storage
- Deletes generated files from previous run
- Generates `N` pages with pseudo-random content
- Runs `gatsby clean`
- Runs `gatsby build`

The default `yarn bench` will build 512 pages with 1gb memory.
