

transfer plugin

[transfer.sh](#) is an easy to use file sharing service from the command line

To use it, add `transfer` to the plugins array in your zshrc file:

```
plugins=(... transfer)
```

Usage

- Transfer a file: `transfer file.txt` .
- Transfer a whole directory (it will be automatically compressed): `transfer dir` .

Encryption / Decryption

- Encrypt and upload a file with symmetric cipher and create ASCII armored output:

```
transfer file -ca
```

- Encrypt and upload directory with symmetric cipher and gpg output:

```
transfer directory -ca
```

- Decrypt file:

```
gpg -d file -ca
```

- Decrypt directory:

```
gpg -d your_archive.tgz.gpg | tar xz
```
