使用 `fileList` 对列表进行完全控制，可以实现各种自定义功能，以下演示二种情况：

1. 上传列表数量的限制。
2. 读取远程路径并显示链接。

en-US

You can gain full control over `filelist` by configuring `fileList` . You can accomplish all kinds of customized functions. The following shows two circumstances:

1. limit the number of uploaded files.
2. read from response and show file link.

```
import { Upload, Button } from 'antd';
import { UploadOutlined } from '@ant-design/icons';

class MyUpload extends React.Component {
  state = {
    fileList: [
      {
        uid: '-1',
        name: 'xxx.png',
        status: 'done',
        url: 'http://www.baidu.com/xxx.png',
      },
    ],
  };

  handleChange = info => {
    let fileList = [...info.fileList];

    // 1. Limit the number of uploaded files
    // Only to show two recent uploaded files, and old ones will be replaced by the
    new
    fileList = fileList.slice(-2);

    // 2. Read from response and show file link
    fileList = fileList.map(file => {
      if (file.response) {
        // Component will show file.url as link
        file.url = file.response.url;
      }
      return file;
    });

    this.setState({ fileList });
  };
};
```

```
render() {  
  const props = {  
    action: 'https://www.mocky.io/v2/5cc8019d300000980a055e76',  
    onChange: this.handleChange,  
    multiple: true,  
  };  
  return (  
    <Upload {...props} fileList={this.state.fileList}>  
      <Button icon={<UploadOutlined />}>Upload</Button>  
    </Upload>  
  );  
}  
  
export default () => <MyUpload />;
```
