

zh-CN

在抽屉内打开新的抽屉，用以解决多分支任务的复杂状况。

en-US

Open a new drawer on top of an existing drawer to handle multi branch tasks.

```
import { Drawer, Button } from 'antd';

class App extends React.Component {
  state = { visible: false, childrenDrawer: false };

  showDrawer = () => {
    this.setState({
      visible: true,
    });
  };

  onClose = () => {
    this.setState({
      visible: false,
    });
  };

  showChildrenDrawer = () => {
    this.setState({
      childrenDrawer: true,
    });
  };

  onChildrenDrawerClose = () => {
    this.setState({
      childrenDrawer: false,
    });
  };

  render() {
    return (
      <>
        <Button type="primary" onClick={this.showDrawer}>
          Open drawer
        </Button>
        <Drawer
          title="Multi-level drawer"
          width={520}
          closable={false}
          onClose={this.onClose}
          visible={this.state.visible}
        >
          <Button type="primary" onClick={this.showChildrenDrawer}>
```

```
        Two-level drawer
      </Button>
      <Drawer
        title="Two-level Drawer"
        width={320}
        closable={false}
        onClose={this.onChildrenDrawerClose}
        visible={this.state.childrenDrawer}
      >
        This is two-level drawer
      </Drawer>
    </Drawer>
  </>
);
}
}

export default () => <App />;
```
