

Class: TouchBarPopover

Create a popover in the touch bar for native macOS applications

Process: Main *This class is not exported from the 'electron' module. It is only available as a return value of other methods in the Electron API.*

new TouchBarPopover(options)

- **options** Object
 - **label** string (optional) - Popover button text.
 - **icon** NativeImage (optional) - Popover button icon.
 - **items** TouchBar - Items to display in the popover.
 - **showCloseButton** boolean (optional) - **true** to display a close button on the left of the popover, **false** to not show it. Default is **true**.

Instance Properties

The following properties are available on instances of **TouchBarPopover**:

touchBarPopover.label A **string** representing the popover's current button text. Changing this value immediately updates the popover in the touch bar.

touchBarPopover.icon A **NativeImage** representing the popover's current button icon. Changing this value immediately updates the popover in the touch bar.
