

A component can change its category altogether with `<svelte:component>`. Instead of a sequence of if blocks...

```
{#if selected.color === 'red'}
  <RedThing/>
{:else if selected.color === 'green'}
  <GreenThing/>
{:else if selected.color === 'blue'}
  <BlueThing/>
{/if}
```

...we can have a single dynamic component:

```
<svelte:component this={selected.component}/>
```

The `this` value can be any component constructor, or a falsy value — if it's falsy, no component is rendered.
