

# Adding AMP Components

The AMP community provides [many components](#) to make AMP pages more interactive. Next.js will automatically import all components used on a page and there is no need to manually import AMP component scripts:

```
export const config = { amp: true }

function MyAmpPage() {
  const date = new Date()

  return (
    <div>
      <p>Some time: {date.toJSON()}</p>
      <amp-timeago
        width="0"
        height="15"
        datetime={date.toJSON()}
        layout="responsive"
      >
        .
      </amp-timeago>
    </div>
  )
}

export default MyAmpPage
```

The above example uses the [amp-timeago](#) component.

By default, the latest version of a component is always imported. If you want to customize the version, you can use `next/head`, as in the following example:

```
import Head from 'next/head'

export const config = { amp: true }

function MyAmpPage() {
  const date = new Date()

  return (
    <div>
      <Head>
        <script
          async
          key="amp-timeago"
          custom-element="amp-timeago"
          src="https://cdn.ampproject.org/v0/amp-timeago-0.1.js"
        />
      </Head>
    </div>
  )
}
```

```
<p>Some time: {date.toJSON()}</p>
<amp-timeago
  width="0"
  height="15"
  datetime={date.toJSON()}
  layout="responsive"
>
  .
</amp-timeago>
</div>
)
}

export default MyAmpPage
```
