

Deta Base Example

An example using [Deta Base](#) in a Next.js project.

Deploy your own

Once you have access to [the environment variables you'll need](#), deploy the example using [Vercel](#):

How to use

Execute [create-next-app](#) with [npm](#) or [Yarn](#) to bootstrap the example:

```
npx create-next-app --example with-deta-base with-deta-base-app
# or
yarn create next-app --example with-deta-base with-deta-base-app
# or
pnpm create next-app -- --example with-deta-base with-deta-base-app
```

Configuration

Step 1. Create a Deta Account

Create an account on [Deta](#). Save the default *Project Key* which will be auto-generated on account creation.

Step 2. Setting Up Environment Variables

Copy the `.env.local.example` file from this directory to `.env.local` (which will be ignored by Git):

```
cp .env.local.example .env.local
```

Then set each variable on `.env.local`:

- `DETA_PROJECT_KEY` should be the default *Project Key* that you saved from step 1.

The resulting `env.local` file should look like this:

```
DETA_PROJECT_KEY=...
```

Step 3. Run Next.js in development mode

```
npm install
npm run dev

# or
```

```
yarn install
yarn dev
```

Your todo app should be up and running on <http://localhost:3000>! If it doesn't work, post on [GitHub discussions](#).

Step 4. Deploy on Vercel

You can deploy this app to the cloud with [Vercel](#) ([Documentation](#)).

Deploy Your Local Project

To deploy your local project to Vercel, push it to GitHub/GitLab/Bitbucket and [import to Vercel](#).

Important: When you import your project on Vercel, make sure to click on **Environment Variables** and set them to match your `.env.local` file.

Deploy from Our Template

Alternatively, you can deploy using our template by clicking on the Deploy button below.
