

## zh-CN

使用 `status` 为 Cascader 添加状态, 可选 `error` 或者 `warning`。

## en-US

Add status to Cascader with `status`, which could be `error` or `warning`.

```
import { Cascader, Space } from 'antd';

const Validation: React.FC = () => (
  <Space direction="vertical">
    <Cascader status="error" placeholder="Error" />
    <Cascader status="warning" multiple placeholder="Warning multiple" />
  </Space>
);

export default () => <Validation />;
```
