

SSG `fallback: true` Export Error

Why This Error Occurred

You attempted to export a page with a `fallback: true` return value from `getStaticPaths` which is invalid. `fallback: true` is meant for building pages on-demand after a build has occurred, exporting disables this functionality

Possible Ways to Fix It

If you would like the `fallback: true` behavior, `next export` should not be used. Instead follow the [deployment documentation](#) to deploy your incrementally generated static site.
