

This file is just the same as `coffeescript_tests.coffee`, first we set a property, which we check for in `coffeescript_tests.js`, and then a trivial testcase.

```
import { Meteor } from "meteor/meteor"
import { Tinytest } from "meteor/tinytest"
```

```
Meteor.__COFFEEMDSCRIPT_PRESENT = true
Tinytest.add "markdown coffeescript - compile", (test) -> test.isTrue true
```
