

Introduction to the Angular Docs

Angular is an application design framework and development platform for creating efficient and sophisticated single-page apps.

These Angular docs help you learn and use the Angular framework and development platform, from your first application to optimizing complex single-page apps for enterprises. Tutorials and guides include downloadable examples to accelerate your projects.

What is Angular

<p>Get a high-level overview of the Angular platform.</p>
<p class="card-footer">Platform overview</p>

Getting started

<p>Examine and work with a small ready-made Angular app, without any setup.</p>
<p class="card-footer">Try it now</p>

Learn and Explore

<p>Learn about the fundamental design concepts and architecture of Angular apps.</p>
<p class="card-footer">Introduction to Angular concepts</p>

Set up your environment

<p>Set up your local environment for development with the Angular CLI.</p>
<p class="card-footer">Local setup</p>

Hello World

<p>Work through a full tutorial to create your first app.</p>
<p class="card-footer">Tour of Heroes tutorial</p>

Assumptions

These docs assume that you are already familiar with HTML, CSS, JavaScript, and some of the tools from the latest standards, such as classes and modules. The code samples are written using TypeScript. Most Angular code can be written with just the latest JavaScript, using types for dependency injection, and using decorators for metadata.

Feedback

You can sit with us!

We want to hear from you. Report problems or submit suggestions for future docs.

Contribute to Angular docs by creating pull requests on the Angular Github repository. See [Contributing to Angular](#) for information about submission guidelines.

Our community values respectful, supportive communication. Please consult and adhere to the Code of Conduct.
