

Flutter reports data to two separate systems:

1. Anonymous usage statistics are reported to Google Analytics (for statistics such as the number of times the **flutter** tool was run within a given time period). The code that manages this is in [usage.dart].
2. Crash reports for the **flutter** tool. These are not reports of when Flutter applications crash, but rather when the command-line **flutter** tool itself crashes. The code that manages this is in [crash_reporting.dart].

Opting out

Users can opt out of all reporting in a single place by running **flutter config --no-analytics**.
