

PowerToys Source Code

Code organization

The PowerToys are split into DLLs for each PowerToy module (**modules** folder), and an executable (**runner** folder) that loads and manages those DLLs.

The settings window is a separate executable, contained in **settings-ui** folder. It utilizes a WebView to display an HTML-based settings window.

The **common** contains code for a static library with helper functions, used by both the runner and the PowerToys modules.
