

Home > puppeteer > Page > setContent

Page.setContent() method

Signature:

```
setContent(html: string, options?: WaitForOptions): Promise<void>;
```

Parameters

Parameter	Type	Description
html	string	HTML markup to assign to the page.
options	WaitForOptions	Parameters that has some properties.

Returns:

Promise<void>

Remarks

The parameter **options** might have the following options.

- **timeout** : Maximum time in milliseconds for resources to load, defaults to 30 seconds, pass 0 to disable timeout. The default value can be changed by using the `page.setDefaultNavigationTimeout(timeout)` or `page.setDefaultTimeout(timeout)` methods.
- **waitUntil**: When to consider setting markup succeeded, defaults to **load**. Given an array of event strings, setting content is considered to be successful after all events have been fired. Events can be either: - **load** : consider setting content to be finished when the **load** event is fired. - **domcontentloaded** : consider setting content to be finished when the **DOMContentLoaded** event is fired. - **networkidle0** : consider setting content to be finished when there are no more than 0 network connections for at least 500 ms. - **networkidle2** : consider setting content to be finished when there are no more than 2 network connections for at least 500 ms.
