

ReactMD and Next.js Example

This example sets up a simple [ReactMD](#) and Next.js app featuring:

- [variables.scss](#) to override the default `react-md` theme and feature toggles
- [app.scss](#) global styles that conditionally apply the dark theme based on the user's OS preferences
- a custom [_app.jsx](#) that uses a persistent layout
- a reusable [Layout.jsx](#) that:
 - updates all the icons to use `SVGIcons` instead of `FontIcons`
 - initializes the `Layout` component from `react-md` with navigation items

For more information about ReactMD's features, styling, components, and API, check out the [main documentation](#).

You can also view the [documentation site's source code](#) for a more complex example of using ReactMD + Next.js or the [with-react-md-typescript](#) example for Typescript support.

Deploy your own

Deploy the example using [Vercel](#) or preview live with [StackBlitz](#)

How to use

Execute `create-next-app` with [npm](#) or [Yarn](#) to bootstrap the example:

```
npx create-next-app --example with-react-md with-react-md-app
# or
yarn create next-app --example with-react-md with-react-md-app
# or
pnpm create next-app -- --example with-react-md with-react-md-app
```

Deploy it to the cloud with [Vercel](#) ([Documentation](#)).
