

zh-CN

大数据下使用分页。

en-US

large count of items with pagination.

```
import { Transfer, Switch } from 'antd';

const App = () => {
  const [oneWay, setOneWay] = React.useState(false);
  const [mockData, setMockData] = React.useState([]);
  const [targetKeys, setTargetKeys] = React.useState([]);

  React.useEffect(() => {
    const newTargetKeys = [];
    const newMockData = [];
    for (let i = 0; i < 2000; i++) {
      const data = {
        key: i.toString(),
        title: `content${i + 1}`,
        description: `description of content${i + 1}`,
        chosen: Math.random() * 2 > 1,
      };
      if (data.chosen) {
        newTargetKeys.push(data.key);
      }
      newMockData.push(data);
    }

    setTargetKeys(newTargetKeys);
    setMockData(newMockData);
  }, []);

  const onChange = (newTargetKeys, direction, moveKeys) => {
    console.log(newTargetKeys, direction, moveKeys);
    setTargetKeys(newTargetKeys);
  };

  return (
    <>
      <Transfer
        dataSource={mockData}
        targetKeys={targetKeys}
        onChange={onChange}
        render={item => item.title}
        oneWay={oneWay}
        pagination
      />
      <br />
    </>
  );
}
```

```
    <Switch
      uncheckedChildren="one way"
      checkedChildren="one way"
      checked={oneWay}
      onChange={setOneWay}
    />
  </>
);
};

export default () => <App />;
```
