Configure repeating rows

As seen above with the panels you can also repeat rows if you have variables set with `Multi-value` or `Include all value` selection option.

Before you begin

- Ensure that the query includes a multi-value variable.

To configure repeating rows:

1. On the dashboard home page, click **Add panel**.
2. On the **Add a panel** dialog box, click **Add a new row**.
3. Hover over the row title and click the cog icon.
4. On the `Row Options` configuration panel, select the variable for which you want to add repeating rows.

To help provide context to dashboard users, add the variable to the row title.
