

Thanks for using React Native! If you need help with your React Native app, the right place to go depends on the type of help that you need.

I have a question or need help with my React Native app.

If you have a coding question related to React Native, it might be better suited for Stack Overflow. It's a great place to browse through [frequent questions about using React Native](#), as well as [ask for help with specific questions](#).

[Reactiflux](#) is an active community of React and React Native developers. If you are looking for immediate assistance or have a general question about React Native, the #react-native channel is a good place to start.

I found something that seems wrong in the documentation.

The React Native website is hosted on a [separate repository](#). If you want to report something that is wrong or missing from the documentation, [please open a new issue there](#).

I found a bug in React Native.

If you want to report a reproducible bug or regression in the React Native library, you can [create a new issue](#). It's a good idea to look through [open issues](#) before doing so, as someone else may have reported a similar issue.

I want to discuss the future of React Native.

If you'd like to discuss topics related to the future of React Native, please check out the [React Native Community Discussions and Proposals](#) repository.

I want to talk to other React Native developers.

If you want to participate in casual discussions about the use of React Native, consider participating in one of the following forums:

- [Reactiflux Discord Server](#)
- [Spectrum Chat](#)
- [React Native Community Facebook Group](#)

For a full list of community resources, check out [React Native's Community page](#).
