

zh-CN

通过 `stringMode` 开启高精度小数支持，`onChange` 事件将返回 `string` 类型。对于旧版浏览器，你需要 `BigInt` polyfill。

en-US

Use `stringMode` to support high precision decimals support. `onChange` will return string value instead. You need polyfill of `BigInt` if browser not support.

```
import { InputNumber } from 'antd';

function onChange(value: string) {
  console.log('changed', value);
}

export default () => (
  <InputNumber<string>
    style={{ width: 200 }}
    defaultValue="1"
    min="0"
    max="10"
    step="0.000000000000001"
    onChange={onChange}
    stringMode
  />
);
```
