

public-api/

This directory contains all of the public api goldens for our npm packages we publish to NPM. These are tested on all PRs and commits as part of our bazel tests.

To check or update the public api goldens, run one of the following commands:

```
yarn public-api:check  
yarn public-api:update
```

packages-circular-deps.json

This golden file contains a list of all circular dependencies in the project. As part of the lint CI job we compare the current circular dependencies against this golden to ensure that we don't add more cycles. If cycles have been fixed, this file is also updated so that we can slowly burn down the number of cycles in the project.

To check or update the golden, run the following commands:

```
yarn ts-circular-deps:check  
yarn ts-circular-deps:approve
```
