

What's New In Python 3.2

Author: Raymond Hettinger

This article explains the new features in Python 3.2 as compared to 3.1. It focuses on a few highlights and gives a few examples. For full details, see the [Misc/NEWS](#) file.

```

PEP 384: Defining a Stable ABI

In the past, extension modules built for one Python version were often not usable with other Python versions. Particularly on Windows, every feature release of Python required rebuilding all extension modules that one wanted to use. This requirement was the result of the free access to Python interpreter internals that extension modules could use.

With Python 3.2, an alternative approach becomes available: extension modules which restrict themselves to a limited API (by defining `Py_LIMITED_API`) cannot use many of the internals, but are constrained to a set of API functions that are promised to be stable for several releases. As a consequence, extension modules built for 3.2 in that mode will also work with 3.3, 3.4, and so on. Extension modules that make use of details of memory structures can still be built, but will need to be recompiled for every feature release.

```

PEP 389: Argparse Command Line Parsing Module

A new module for command line parsing, `mod:argparse`, was introduced to overcome the limitations of `mod:optparse` which did not provide support for positional arguments (not just options), subcommands, required options and other common patterns of specifying and validating options.

```
System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\cpython-main [Doc] [whatsnew] 3.2.rst, line 89); backlink
```

Unknown interpreted text role "mod".

```
System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\cpython-main [Doc] [whatsnew] 3.2.rst, line 89); backlink
```

Unknown interpreted text role "mod".

This module has already had widespread success in the community as a third-party module. Being more fully featured than its predecessor, the `mod:argparse` module is now the preferred module for command-line processing. The older module is still being kept available because of the substantial amount of legacy code that depends on it.

```
System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\cpython-main [Doc] [whatsnew] 3.2.rst, line 94); backlink
```

Unknown interpreted text role "mod".

Here's an annotated example parser showing features like limiting results to a set of choices, specifying a *metavar* in the help screen, validating that one or more positional arguments is present, and making a required option:

```
import argparse
parser = argparse.ArgumentParser(
    description = 'Manage servers',          # main description for help
    epilog = 'Tested on Solaris and Linux') # displayed after help
parser.add_argument('action',               # argument name
    choices = ['deploy', 'start', 'stop'],  # three allowed values
    help = 'action on each target')         # help msg
parser.add_argument('targets',              # var name used in help msg
    metavar = 'HOSTNAME',
```

```

        nargs = '+',
        help = 'url for target machines')
    parser.add_argument('-u', '--user',
                        required = True,
                        help = 'login as user')
# require one or more targets
# help msg explanation
# -u or --user option
# make it a required argument

```

Example of calling the parser on a command string:

```

>>> cmd = 'deploy sneezy.example.com sleepy.example.com -u skycaptain'
>>> result = parser.parse_args(cmd.split())
>>> result.action
'deploy'
>>> result.targets
['sneezy.example.com', 'sleepy.example.com']
>>> result.user
'skycaptain'

```

Example of the parser's automatically generated help:

```

>>> parser.parse_args('-h'.split())

usage: manage_cloud.py [-h] -u USER
                    {deploy,start,stop} HOSTNAME [HOSTNAME ...]

Manage servers

positional arguments:
  {deploy,start,stop}  action on each target
  HOSTNAME             url for target machines

optional arguments:
  -h, --help            show this help message and exit
  -u USER, --user USER login as user

Tested on Solaris and Linux

```

An especially nice `mod:'argparse'` feature is the ability to define subparsers, each with their own argument patterns and help displays:

System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\cpython-main [Doc] [whatsnew] 3.2.rst, line 149); [backlink](#)

Unknown interpreted text role "mod".

```

import argparse
parser = argparse.ArgumentParser(prog='HELM')
subparsers = parser.add_subparsers()

parser_l = subparsers.add_parser('launch', help='Launch Control') # first subgroup
parser_l.add_argument('-m', '--missiles', action='store_true')
parser_l.add_argument('-t', '--torpedos', action='store_true')

parser_m = subparsers.add_parser('move', help='Move Vessel', # second subgroup
                                aliases=('steer', 'turn')) # equivalent names
parser_m.add_argument('-c', '--course', type=int, required=True)
parser_m.add_argument('-s', '--speed', type=int, default=0)

$ ./helm.py --help # top level help (launch and move)
$ ./helm.py launch --help # help for launch options
$ ./helm.py launch --missiles # set missiles=True and torpedos=False
$ ./helm.py steer --course 180 --speed 5 # set movement parameters

```

System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\cpython-main [Doc] [whatsnew] 3.2.rst, line 172)

```

PEP 391: Dictionary Based Configuration for Logging

The `mod:'logging'` module provided two kinds of configuration, one style with function calls for each option or another style driven by an external file saved in a `mod:'ConfigParser'` format. Those options did not provide the flexibility to create configurations from JSON or YAML files, nor did they support incremental configuration, which is needed for specifying logger options from a command line.

System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\cpython-main [Doc] [whatsnew] 3.2.rst, line 183); [backlink](#)

Unknown interpreted text role "mod".

System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\cpython-main [Doc] [whatsnew] 3.2.rst, line 183); [backlink](#)

Unknown interpreted text role "mod".

To support a more flexible style, the module now offers `:func:`logging.config.dictConfig`` for specifying logging configuration with plain Python dictionaries. The configuration options include formatters, handlers, filters, and loggers. Here's a working example of a configuration dictionary:

System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\cpython-main [Doc] [whatsnew] 3.2.rst, line 190); [backlink](#)

Unknown interpreted text role "func".

```
{ "version": 1,
  "formatters": { "brief": { "format": "%(levelname)-8s: %(name)-15s: %(message)s" },
                  "full": { "format": "%(asctime)s %(name)-15s %(levelname)-8s %(message)s" }
                },
  "handlers": { "console": {
                  "class": "logging.StreamHandler",
                  "formatter": "brief",
                  "level": "INFO",
                  "stream": "ext://sys.stdout",
                  "console_priority": {
                    "class": "logging.StreamHandler",
                    "formatter": "full",
                    "level": "ERROR",
                    "stream": "ext://sys.stderr"
                  }
                },
  "root": { "level": "DEBUG", "handlers": [ "console", "console_priority" ] }
```

If that dictionary is stored in a file called `:file:`conf.json``, it can be loaded and called with code like this:

System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\cpython-main [Doc] [whatsnew] 3.2.rst, line 214); [backlink](#)

Unknown interpreted text role "file".

```
>>> import json, logging.config
>>> with open('conf.json') as f:
...     conf = json.load(f)
...
>>> logging.config.dictConfig(conf)
>>> logging.info("Transaction completed normally")
INFO      : root      : Transaction completed normally
>>> logging.critical("Abnormal termination")
2011-02-17 11:14:36,694 root      CRITICAL Abnormal termination
```

System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\cpython-main [Doc] [whatsnew] 3.2.rst, line 227)

Unknown directive type "seealso".

:pep:`391` - Dictionary Based Configuration for Logging
PEP written by Vinay Sajip.

PEP 3148: The `concurrent.futures` module

Code for creating and managing concurrency is being collected in a new top-level namespace, *concurrent*. Its first member is a *futures* package which provides a uniform high-level interface for managing threads and processes.

The design for `:mod:`concurrent.futures`` was inspired by the *java.util.concurrent* package. In that model, a running call and its result are represented by a `:class:`~concurrent.futures.Future`` object that abstracts features common to threads, processes, and remote procedure calls. That object supports status checks (running or done), timeouts, cancellations, adding callbacks, and access to results or exceptions.

System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\cpython-main [Doc] [whatsnew] 3.2.rst, line 240); [backlink](#)

Unknown interpreted text role "mod".

System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\cpython-main [Doc] [whatsnew] 3.2.rst, line 240); [backlink](#)

Unknown interpreted text role "class".

The primary offering of the new module is a pair of executor classes for launching and managing calls. The goal of the executors is to make it easier to use existing tools for making parallel calls. They save the effort needed to setup a pool of resources, launch the calls,

create a results queue, add time-out handling, and limit the total number of threads, processes, or remote procedure calls.

Ideally, each application should share a single executor across multiple components so that process and thread limits can be centrally managed. This solves the design challenge that arises when each component has its own competing strategy for resource management.

Both classes share a common interface with three methods: `meth:~concurrent.futures.Executor.submit` for scheduling a callable and returning a `class:~concurrent.futures.Future` object; `meth:~concurrent.futures.Executor.map` for scheduling many asynchronous calls at a time, and `meth:~concurrent.futures.Executor.shutdown` for freeing resources. The class is a `term:context manager` and can be used in a `keyword:with` statement to assure that resources are automatically released when currently pending futures are done executing.

System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\cpython-main [Doc] [whatsnew] 3.2.rst, line 259); [backlink](#)

Unknown interpreted text role "meth".

```

PEP 3147: PYC Repository Directories

Python's scheme for caching bytecode in `.pyc` files did not work well in environments with multiple Python interpreters. If one interpreter encountered a cached file created by another interpreter, it would recompile the source and overwrite the cached file, thus losing the benefits of caching.

The issue of "pyc fights" has become more pronounced as it has become commonplace for Linux distributions to ship with multiple versions of Python. These conflicts also arise with CPython alternatives such as Unladen Swallow.

To solve this problem, Python's import machinery has been extended to use distinct filenames for each interpreter. Instead of Python 3.2 and Python 3.3 and Unladen Swallow each competing for a file called "mymodule.pyc", they will now look for "mymodule.cpython-32.pyc", "mymodule.cpython-33.pyc", and "mymodule.unladen10.pyc". And to prevent all of these new files from cluttering source directories, the *pyc* files are now collected in a "`__pycache__`" directory stored under the package directory.

Aside from the filenames and target directories, the new scheme has a few aspects that are visible to the programmer:

- Imported modules now have a `__cached__` attribute which stores the name of the actual file that was imported:

System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 3.2.rst, line 314); [backlink](#)

Unknown interpreted text role "attr".

```
>>> import collections
>>> collections.__cached__ # doctest: +SKIP
'c:/py32/lib/__pycache__/collections.cpython-32.pyc'
```

- The tag that is unique to each interpreter is accessible from the `mod.__imp__` module:

System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 3.2.rst, line 321); [backlink](#)

Unknown interpreted text role "mod".

```
>>> import imp
>>> imp.get_tag() # doctest: +SKIP
'cpython-32'
```

- Scripts that try to deduce source filename from the imported file now need to be smarter. It is no longer sufficient to simply strip the "c" from a ".pyc" filename. Instead, use the new functions in the `mod.__imp__` module:

System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 3.2.rst, line 328); [backlink](#)

Unknown interpreted text role "mod".

```
>>> imp.source_from_cache('c:/py32/lib/__pycache__/collections.cpython-32.pyc')
'c:/py32/lib/collections.py'
>>> imp.cache_from_source('c:/py32/lib/collections.py') # doctest: +SKIP
'c:/py32/lib/__pycache__/collections.cpython-32.pyc'
```

- The `mod.__py_compile__` and `mod.__compileall__` modules have been updated to reflect the new naming convention and target directory. The command-line invocation of *compileall* has new options: `-i` for specifying a list of files and directories to compile and `-b` which causes bytecode files to be written to their legacy location rather than `__pycache__`.

System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 3.2.rst, line 337); [backlink](#)

Unknown interpreted text role "mod".

- The `mod.__importlib.abc__` module has been updated with new `term__` abstract base classes `<abstract base class>` for loading bytecode files. The obsolete ABCs, `__class__:~importlib.abc.PyLoader` and `__class__:~importlib.abc.PyPycLoader`, have been deprecated (instructions on how to stay Python 3.1 compatible are included with the documentation).

:pep:`3147` - PYC Repository Directories
    PEP written by Barry Warsaw.
```

PEP 3149: ABI Version Tagged .so Files

The PYC repository directory allows multiple bytecode cache files to be co-located. This PEP implements a similar mechanism for shared object files by giving them a common directory and distinct names for each version.

The common directory is "pyshared" and the file names are made distinct by identifying the Python implementation (such as CPython, PyPy, Jython, etc.), the major and minor version numbers, and optional build flags (such as "d" for debug, "m" for pymalloc, "u" for wide-unicode). For an arbitrary package "foo", you may see these files when the distribution package is installed:

```
/usr/share/pyshared/foo.cpython-32m.so
/usr/share/pyshared/foo.cpython-33md.so
```

In Python itself, the tags are accessible from functions in the `mod:'sysconfig'` module:

System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 3.2.rst, line 372); [backlink](#)

    PEP written by Barry Warsaw.
```

PEP 3333: Python Web Server Gateway Interface v1.0.1

This informational PEP clarifies how bytes/text issues are to be handled by the WSGI protocol. The challenge is that string handling in Python 3 is most conveniently handled with the `class:'str'` type even though the HTTP protocol is itself bytes oriented.

System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 3.2.rst, line 390); [backlink](#)

Unknown interpreted text role "class".

The PEP differentiates so-called *native strings* that are used for request/response headers and metadata versus *byte strings* which are used for the bodies of requests and responses.

The *native strings* are always of type `class:'str'` but are restricted to code points between *U+0000* through *U+00FF* which are translatable to bytes using *Latin-1* encoding. These strings are used for the keys and values in the environment dictionary and for response headers and statuses in the `func:'start_response'` function. They must follow [RFC 2616](#) with respect to encoding. That is, they must either be *ISO-8859-1* characters or use [RFC 2047](#) MIME encoding.

System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-

main\Doc\whatsnew\[cpython-main] [Doc] [whatsnew] 3.2.rst, line 399); [backlink](#)

Unknown interpreted text role "class".

System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\[cpython-main] [Doc] [whatsnew] 3.2.rst, line 399); [backlink](#)

Unknown interpreted text role "func".

For developers porting WSGI applications from Python 2, here are the salient points:

- If the app already used strings for headers in Python 2, no change is needed.
- If instead, the app encoded output headers or decoded input headers, then the headers will need to be re-encoded to Latin-1. For example, an output header encoded in utf-8 was using `h.encode('utf-8')` now needs to convert from bytes to native strings using `h.encode('utf-8').decode('latin-1')`.
- Values yielded by an application or sent using the `meth:'write'` method must be byte strings. The `:func:'start_response'` function and `environ` must use native strings. The two cannot be mixed.

System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\[cpython-main] [Doc] [whatsnew] 3.2.rst, line 417); [backlink](#)

Unknown interpreted text role "meth".

System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\[cpython-main] [Doc] [whatsnew] 3.2.rst, line 417); [backlink](#)

Unknown interpreted text role "func".

For server implementers writing CGI-to-WSGI pathways or other CGI-style protocols, the users must be able access the environment using native strings even though the underlying platform may have a different convention. To bridge this gap, the `mod:wsgiref` module has a new function, `:func:wsgiref.handlers.read_environ` for transcoding CGI variables from `:attr:os.environ` into native strings and returning a new dictionary.

:pep:`3333` - Python Web Server Gateway Interface v1.0.1
PEP written by Phillip Eby.

Other Language Changes

Some smaller changes made to the core Python language are:

- String formatting for `:func:'format'` and `meth:'str.format'` gained new capabilities for the format character `#`. Previously, for integers in binary, octal, or hexadecimal, it caused the output to be prefixed with `'0b'`, `'0o'`, or `'0x'` respectively. Now it can also handle floats, complex, and Decimal, causing the output to always have a decimal point even when no digits follow it.

- There is also a new `meth: str.format_map` method that extends the capabilities of the existing `meth: str.format` method by accepting arbitrary `term: mapping` objects. This new method makes it possible to use string formatting with any of Python's many dictionary-like objects such as `class: ~collections.defaultdict`, `class: ~shelve.Shelf`, `class: ~configparser.ConfigParser`, or `mod: dbm`. It is also useful with custom `class: dict` subclasses that normalize keys before look-up or that supply a `meth: __missing__` method for unknown keys:

New, Improved, and Deprecated Modules

Python's standard library has undergone significant maintenance efforts and quality improvements.

The biggest news for Python 3.2 is that the `:mod:'email'` package, `:mod:'mailbox'` module, and `:mod:'nntplib'` modules now work

correctly with the bytes/text model in Python 3. For the first time, there is correct handling of messages with mixed encodings.

System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\cpython-main [Doc] [whatsnew] 3.2.rst, line 661); [backlink](#)

Unknown interpreted text role "mod".

Throughout the standard library, there has been more careful attention to encodings and text versus bytes issues. In particular, interactions with the operating system are now better able to exchange non-ASCII data using the Windows MBCS encoding, locale-aware encodings, or UTF-8.

Another significant win is the addition of substantially better support for SSL connections and security certificates.

In addition, more classes now implement a `term`context manager`` to support convenient and reliable resource clean-up using a `keyword:`with`` statement.

email

The usability of the `mod:`email`` package in Python 3 has been mostly fixed by the extensive efforts of R. David Murray. The problem was that emails are typically read and stored in the form of `class:`bytes`` rather than `class:`str`` text, and they may contain multiple encodings within a single email. So, the email package had to be extended to parse and generate email messages in bytes format.

functools

- The `mod:'functools'` module includes a new decorator for caching function calls. `func:'functools.lru_cache'` can save repeated queries to an external resource whenever the results are expected to be the same.

System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 3.2.rst, line 754); [backlink](#)

Unknown interpreted text role "mod".

System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\[cpython-main] [Doc] [whatsnew] 3.2.rst, line 754);
[backlink](#)

Unknown interpreted text role "func".

For example, adding a caching decorator to a database query function can save database accesses for popular searches:

```
>>> import functools
>>> @functools.lru_cache(maxsize=300)
... def get_phone_number(name):
...     c = conn.cursor()
...     c.execute('SELECT phonenumber FROM phonenumber WHERE name=?', (name,))
...     return c.fetchone()[0]

>>> for name in user_requests:           # doctest: +SKIP
...     get_phone_number(name)           # cached lookup
```

To help with choosing an effective cache size, the wrapped function is instrumented for tracking cache statistics:

```
>>> get_phone_number.cache_info()         # doctest: +SKIP
CacheInfo(hits=4805, misses=980, maxsize=300, cursize=300)
```

If the phonenumber table gets updated, the outdated contents of the cache can be cleared with:

```
>>> get_phone_number.cache_clear()
```

(Contributed by Raymond Hettinger and incorporating design ideas from Jim Baker, Miki Tebeka, and Nick Coghlan; see [recipe 498245](#), [recipe 577479](#), [:issue:10586](#), and [:issue:10593](#).)

[backlink](#)

Unknown interpreted text role "issue".

- To help write classes with rich comparison methods, a new decorator `:func:`functools.total_ordering`` will use existing equality and inequality methods to fill in the remaining methods.

System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 3.2.rst, line 802);
[backlink](#)

Unknown interpreted text role "func".

For example, supplying `__eq__` and `__lt__` will enable `:func:`~functools.total_ordering`` to fill-in `__le__`, `__gt__` and `__ge__`:

System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 3.2.rst, line 806);
[backlink](#)

Unknown interpreted text role "func".

```
@total_ordering
class Student:
    def __eq__(self, other):
        return ((self.lastname.lower(), self.firstname.lower()) ==
                (other.lastname.lower(), other.firstname.lower()))

    def __lt__(self, other):
        return ((self.lastname.lower(), self.firstname.lower()) <
                (other.lastname.lower(), other.firstname.lower()))
```

With the `total_ordering` decorator, the remaining comparison methods are filled in automatically.

(Contributed by Raymond Hettinger.)

- To aid in porting programs from Python 2, the `:func:`functools.cmp_to_key`` function converts an old-style comparison function to modern `:term:`key function``:

System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 3.2.rst, line 824);
[backlink](#)

Unknown interpreted text role "meth".

```
>>> from collections import Counter
>>> tally = Counter(dogs=5, cats=3)
>>> tally -= Counter(dogs=2, cats=8) # saturating subtraction
>>> tally
Counter({'dogs': 3})
```

```
>>> tally = Counter(dogs=5, cats=3)
>>> tally.subtract(dogs=2, cats=8) # regular subtraction
>>> tally
Counter({'dogs': 3, 'cats': -5})
```

(Contributed by Raymond Hettinger.)

- The `class`collections.OrderedDict`` class has a new method `meth`~collections.OrderedDict.move_to_end`` which takes an existing key and moves it to either the first or last position in the ordered sequence.

System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 3.2.rst, line 880); [backlink](#)

Unknown interpreted text role "class".

System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 3.2.rst, line 880); [backlink](#)

Unknown interpreted text role "meth".

The default is to move an item to the last position. This is equivalent of renewing an entry with `od[k] = od.pop(k)`.

A fast move-to-end operation is useful for resequencing entries. For example, an ordered dictionary can be used to track order of access by aging entries from the oldest to the most recently accessed.

```
>>> from collections import OrderedDict
>>> d = OrderedDict.fromkeys(['a', 'b', 'X', 'd', 'e'])
>>> list(d)
['a', 'b', 'X', 'd', 'e']
>>> d.move_to_end('X')
>>> list(d)
['a', 'b', 'd', 'e', 'X']
```

(Contributed by Raymond Hettinger.)

- The `:class:`collections.deque`` class grew two new methods `:meth:`~collections.deque.count`` and `:meth:`~collections.deque.reverse`` that make them more substitutable for `:class:`list`` objects:

System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 3.2.rst, line 901);

```

(Contributed by Raymond Hettinger.)

threading

The `:mod:`threading`` module has a new `:class:`~threading.Barrier`` synchronization class for making multiple threads wait until all of them have reached a common barrier point. Barriers are useful for making sure that a task with multiple preconditions does not run until all of the predecessor tasks are complete.

System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 3.2.rst, line 918); [backlink](#)

Unknown interpreted text role "mod".

System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 3.2.rst, line 918); [backlink](#)

Unknown interpreted text role "class".

Barriers can work with an arbitrary number of threads. This is a generalization of a [Rendezvous](#) which is defined for only two threads.

Implemented as a two-phase cyclic barrier, `:class:`~threading.Barrier`` objects are suitable for use in loops. The separate *filling* and *draining* phases assure that all threads get released (drained) before any one of them can loop back and re-enter the barrier. The barrier fully resets after each cycle.

System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 3.2.rst, line 928); [backlink](#)

Unknown interpreted text role "class".

Example of using barriers:

```
from threading import Barrier, Thread
```

```
def get_votes(site):
    ballots = conduct_election(site)
    all_polls_closed.wait() # do not count until all polls are closed
    totals = summarize(ballots)
    publish(site, totals)

all_polls_closed = Barrier(len(sites))
for site in sites:
    Thread(target=get_votes, args=(site,)).start()
```

In this example, the barrier enforces a rule that votes cannot be counted at any polling site until all polls are closed. Notice how a solution with a barrier is similar to one with `meth: threading.Thread.join`, but the threads stay alive and continue to do work (summarizing ballots) after the barrier point is crossed.

System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 3.2.rst, line 947); [backlink](#)

Unknown interpreted text role "meth".

If any of the predecessor tasks can hang or be delayed, a barrier can be created with an optional *timeout* parameter. Then if the timeout period elapses before all the predecessor tasks reach the barrier point, all waiting threads are released and a `exc:~threading.BrokenBarrierError` exception is raised:

System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 3.2.rst, line 953); [backlink](#)

Unknown interpreted text role "exc".

```
def get_votes(site):
    ballots = conduct_election(site)
    try:
        all_polls_closed.wait(timeout=midnight - time.now())
    except BrokenBarrierError:
        lockbox = seal_ballots(ballots)
        queue.put(lockbox)
    else:
        totals = summarize(ballots)
        publish(site, totals)
```

In this example, the barrier enforces a more robust rule. If some election sites do not finish before midnight, the barrier times-out and the ballots are sealed and deposited in a queue for later handling.

See [Barrier Synchronization Patterns](#) for more examples of how barriers can be used in parallel computing. Also, there is a simple but thorough explanation of barriers in [The Little Book of Semaphores](#), section 3.6.

(Contributed by Kristján Valur Jónsson with an API review by Jeffrey Yasskin in `issue:~8777`.)

System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 3.2.rst, line 979); [backlink](#)

datetime and time

- The `mod:~datetime` module has a new type `class:~datetime.timezone` that implements the `class:~datetime.tzinfo` interface by returning a fixed UTC offset and timezone name. This makes it easier to create timezone-aware datetime objects:

System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 3.2.rst, line 985); [backlink](#)

Unknown interpreted text role "mod".

System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 3.2.rst, line 985); [backlink](#)

Unknown interpreted text role "class".

System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 3.2.rst, line 985); [backlink](#)

Unknown interpreted text role "class".

```
>>> from datetime import datetime, timezone

>>> datetime.now(timezone.utc)
datetime.datetime(2010, 12, 8, 21, 4, 2, 923754, tzinfo=datetime.timezone.utc)

>>> datetime.strptime("01/01/2000 12:00 +0000", "%m/%d/%Y %H:%M %z")
```

```
datetime.datetime(2000, 1, 1, 12, 0, tzinfo=datetime.timezone.utc)
```

- Also, `:class:`~datetime.timedelta`` objects can now be multiplied by `:class:`float`` and divided by `:class:`float`` and `:class:`int`` objects. And `:class:`~datetime.timedelta`` objects can now divide one another.

System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 3.2.rst, line 998); [backlink](#)

Unknown interpreted text role "class".

- The `:meth:`datetime.date.strftime`` method is no longer restricted to years after 1900. The new supported year range is from 1000 to 9999 inclusive.

System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 3.2.rst, line 1002); [backlink](#)

Unknown interpreted text role "meth".

- Whenever a two-digit year is used in a time tuple, the interpretation has been governed by `:attr:`time.accept2dyear``. The default is `True` which means that for a two-digit year, the century is guessed according to the POSIX rules governing the `%y` strftime format.

System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 3.2.rst, line 1005); [backlink](#)

Unknown interpreted text role "attr".

Starting with Py3.2, use of the century guessing heuristic will emit a `:exc:`DeprecationWarning``. Instead, it is recommended that `:attr:`time.accept2dyear`` be set to `False` so that large date ranges can be used without guesswork:

System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 3.2.rst, line 1010); [backlink](#)

Unknown interpreted text role "exc".

System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 3.2.rst, line 1010); [backlink](#)

Unknown interpreted text role "attr".

```
>>> import time, warnings
>>> warnings.resetwarnings()          # remove the default warning filters

>>> time.accept2dyear = True          # guess whether 11 means 11 or 2011
>>> time.asctime((11, 1, 1, 12, 34, 56, 4, 1, 0))
Warning (from warnings module):
...
DeprecationWarning: Century info guessed for a 2-digit year.
```

```
'Fri Jan 1 12:34:56 2011'
```

```
>>> time.accept2dyear = False      # use the full range of allowable dates
>>> time.asctime((11, 1, 1, 12, 34, 56, 4, 1, 0))
'Fri Jan 1 12:34:56 11'
```

Several functions now have significantly expanded date ranges. When `:attr:`time.accept2dyear`` is false, the `:func:`time.asctime`` function will accept any year that fits in a C int, while the `:func:`time.mktime`` and `:func:`time.strptime`` functions will accept the full range supported by the corresponding operating system functions.

reprlib

When writing a `meth: __repr__` method for a custom container, it is easy to forget to handle the case where a member refers back to the container itself. Python's builtin objects such as `class: 'list'` and `class: 'set'` handle self-reference by displaying `"..."` in the recursive part of the representation string.

System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\cpython-main [Doc] [whatsnew] 3.2.rst, line 1146); [backlink](#)

Unknown interpreted text role "issue".

contextlib

There is a new and slightly mind-blowing tool `:class:`~contextlib.ContextDecorator`` that is helpful for creating a `term:`context manager`` that does double duty as a function decorator.

System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\cpython-main [Doc] [whatsnew] 3.2.rst, line 1234); [backlink](#)

Unknown interpreted text role "class".

System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\cpython-main [Doc] [whatsnew] 3.2.rst, line 1234); [backlink](#)

Unknown interpreted text role "term".

As a convenience, this new functionality is used by `:func:`~contextlib.contextmanager`` so that no extra effort is needed to support both roles.

System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\cpython-main [Doc] [whatsnew] 3.2.rst, line 1238); [backlink](#)

Unknown interpreted text role "func".

The basic idea is that both context managers and function decorators can be used for pre-action and post-action wrappers. Context managers wrap a group of statements using a `:keyword:`with`` statement, and function decorators wrap a group of statements enclosed in a function. So, occasionally there is a need to write a pre-action or post-action wrapper that can be used in either role.

System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\cpython-main [Doc] [whatsnew] 3.2.rst, line 1242); [backlink](#)

Unknown interpreted text role "keyword".

For example, it is sometimes useful to wrap functions or groups of statements with a logger that can track the time of entry and time of exit. Rather than writing both a function decorator and a context manager for the task, the `:func:`~contextlib.contextmanager`` provides both capabilities in a single definition:

System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\cpython-main [Doc] [whatsnew] 3.2.rst, line 1248); [backlink](#)

Unknown interpreted text role "func".

```
from contextlib import contextmanager
import logging

logging.basicConfig(level=logging.INFO)

@contextmanager
def track_entry_and_exit(name):
    logging.info('Entering: %s', name)
    yield
    logging.info('Exiting: %s', name)
```

Formerly, this would have only been usable as a context manager:

```
with track_entry_and_exit('widget loader'):
    print('Some time consuming activity goes here')
    load_widget()
```

Now, it can be used as a decorator as well:

```
@track_entry_and_exit('widget loader')
def activity():
    print('Some time consuming activity goes here')
    load_widget()
```

Trying to fulfill two roles at once places some limitations on the technique. Context managers normally have the flexibility to return an argument usable by a `:keyword:`with`` statement, but there is no parallel for function decorators.

System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\cpython-main [Doc] [whatsnew] 3.2.rst, line 1278); [backlink](#)

Unknown interpreted text role "keyword".

In the above example, there is not a clean way for the `track_entry_and_exit` context manager to return a logging instance for use in the body of enclosed statements.

(Contributed by Michael Foord in `:issue:`9110``.)

decimal and fractions

Mark Dickinson crafted an elegant and efficient scheme for assuring that different numeric datatypes will have the same hash value

whenever their actual values are equal ([issue: 8188](#)):

System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\cpython-main [Doc] [whatsnew] 3.2.rst, line 1291); [backlink](#)
Unknown interpreted text role "issue".

```
assert hash(Fraction(3, 2)) == hash(1.5) == \
    hash(Decimal("1.5")) == hash(complex(1.5, 0))
```

Some of the hashing details are exposed through a new attribute, `attr:'sys.hash_info'`, which describes the bit width of the hash value, the prime modulus, the hash values for *infinity* and *nan*, and the multiplier used for the imaginary part of a number:

System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\cpython-main [Doc] [whatsnew] 3.2.rst, line 1298); [backlink](#)
Unknown interpreted text role "attr".

```
>>> sys.hash_info # doctest: +SKIP
sys.hash_info(width=64, modulus=2305843009213693951, inf=314159, nan=0, imag=1000003)
```

An early decision to limit the inter-operability of various numeric types has been relaxed. It is still unsupported (and ill-advised) to have implicit mixing in arithmetic expressions such as `Decimal('1.1') + float('1.1')` because the latter loses information in the process of constructing the binary float. However, since existing floating point value can be converted losslessly to either a decimal or rational representation, it makes sense to add them to the constructor and to support mixed-type comparisons.

- The `class:decimal.Decimal` constructor now accepts `class:float` objects directly so there is no longer a need to use the `meth:~decimal.Decimal.from_float` method ([issue: 8257](#)).

System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\cpython-main [Doc] [whatsnew] 3.2.rst, line 1314); [backlink](#)

```

(Implemented by Benjamin Peterson and Georg Brandl.)

os

Different operating systems use various encodings for filenames and environment variables. The `mod:os` module provides two new functions, `func:~os.fsencode` and `func:~os.fsdecode`, for encoding and decoding filenames:

System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 3.2.rst, line 1517); [backlink](#)

Unknown interpreted text role "mod".

System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 3.2.rst, line 1517); [backlink](#)

Unknown interpreted text role "func".

System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 3.2.rst, line 1517); [backlink](#)

Unknown interpreted text role "func".

```
>>> import os  
>>> filename = 'Sehenswürdigkeiten'
```

```
>>> os.fsencode(filename)
b'Sehensw\xc3\xbcrdigkeiten'
```

Some operating systems allow direct access to encoded bytes in the environment. If so, the `attr:'os.supports_bytes_environ'` constant will be true.

System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\cpython-main [Doc] [whatsnew] 3.2.rst, line 1527); [backlink](#)

Unknown interpreted text role "attr".

For direct access to encoded environment variables (if available), use the new `:func:'os.getenvb'` function or use `:data:'os.environb'` which is a bytes version of `:data:'os.environ'`.

System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\cpython-main [Doc] [whatsnew] 3.2.rst, line 1531); [backlink](#)

Unknown interpreted text role "func".

System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\cpython-main [Doc] [whatsnew] 3.2.rst, line 1531); [backlink](#)

Unknown interpreted text role "data".

Unknown interpreted text role "data".

(Contributed by Victor Stinner.)

shutil

The `:func:'shutil.copytree'` function has two new options:

System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\cpython-main [Doc] [whatsnew] 3.2.rst, line 1540); [backlink](#)

Unknown interpreted text role "func".

- `ignore_dangling_symlinks`: when `symlinks=False` so that the function copies a file pointed to by a symlink, not the symlink itself. This option will silence the error raised if the file doesn't exist.
- `copy_function`: is a callable that will be used to copy files. `:func:'shutil.copy2'` is used by default.

System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\cpython-main [Doc] [whatsnew] 3.2.rst, line 1546); [backlink](#)

Unknown interpreted text role "func".

(Contributed by Tarek Ziadé.)

In addition, the `:mod:'shutil'` module now supports `:ref:'archiving operations <archiving-operations>'` for zipfiles, uncompressed tarfiles, gzipped tarfiles, and bzipipped tarfiles. And there are functions for registering additional archiving file formats (such as xz compressed tarfiles or custom formats).

System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\cpython-main [Doc] [whatsnew] 3.2.rst, line 1551); [backlink](#)

Unknown interpreted text role "mod".

System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\cpython-main [Doc] [whatsnew] 3.2.rst, line 1551); [backlink](#)

Unknown interpreted text role "ref".

The principal functions are `:func:'~shutil.make_archive'` and `:func:'~shutil.unpack_archive'`. By default, both operate on the current directory (which can be set by `:func:'os.chdir'`) and on any sub-directories. The archive filename needs to be specified with a full pathname. The archiving step is non-destructive (the original files are left unchanged).

System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\cpython-main [Doc] [whatsnew] 3.2.rst, line 1556); [backlink](#)

Unknown interpreted text role "issue".

html

A new `mod:html` module was introduced with only a single function, `func:~html.escape`, which is used for escaping reserved characters from HTML markup:

System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\[cpython-main] [Doc] [whatsnew] 3.2.rst, line 1607); [backlink](#)

Unknown interpreted text role "mod".

System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 3.2.rst, line 1607); [backlink](#)

Unknown interpreted text role "func".

```
>>> import html
>>> html.escape('x > 2 && x < 7')
'x &gt; 2 &amp;&amp; x &lt; 7'
```

socket

The `mod:'socket'` module has two new improvements.

System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 3.2.rst, line 1618); [backlink](#)

Unknown interpreted text role "mod".

- Socket objects now have a `meth:'~socket.socket.detach()'` method which puts the socket into closed state without actually closing the underlying file descriptor. The latter can then be reused for other purposes. (Added by Antoine Pitrou; `issue:'8524'`.)

System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 3.2.rst, line 1620); [backlink](#)

Unknown interpreted text role "meth".

System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 3.2.rst, line 1620); [backlink](#)

Unknown interpreted text role "issue".

- `func:'socket.create_connection'` now supports the context management protocol to unconditionally consume `exc:'socket.error'` exceptions and to close the socket when done. (Contributed by Giampaolo Rodolà; `issue:'9794'`.)

System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 3.2.rst, line 1625); [backlink](#)

Unknown interpreted text role "func".

System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 3.2.rst, line 1625); [backlink](#)

Unknown interpreted text role "exc".

System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 3.2.rst, line 1625); [backlink](#)

Unknown interpreted text role "issue".

ssl

The `mod:'ssl'` module added a number of features to satisfy common requirements for secure (encrypted, authenticated) internet connections:

System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 3.2.rst, line 1633); [backlink](#)

Unknown interpreted text role "mod".

- A new class, `class:'~ssl.SSLContext'`, serves as a container for persistent SSL data, such as protocol settings, certificates, private keys, and various other options. It includes a `meth:'~ssl.SSLContext.wrap_socket'` for creating an SSL socket from an SSL context.

System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 3.2.rst, line 1636); [backlink](#)

Unknown interpreted text role "class".

System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 3.2.rst, line 1636); [backlink](#)

Unknown interpreted text role "meth".

- A new function, `:func:'ssl.match_hostname'`, supports server identity verification for higher-level protocols by implementing the rules of HTTPS (from [RFC 2818](#)) which are also suitable for other protocols.

System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 3.2.rst, line 1641); [backlink](#)

Unknown interpreted text role "func".

- The `:func:'ssl.wrap_socket'` constructor function now takes a *ciphers* argument. The *ciphers* string lists the allowed encryption algorithms using the format described in the [OpenSSL documentation](#).

System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 3.2.rst, line 1645); [backlink](#)

Unknown interpreted text role "func".

- When linked against recent versions of OpenSSL, the `:mod:'ssl'` module now supports the Server Name Indication extension to the TLS protocol, allowing multiple "virtual hosts" using different certificates on a single IP port. This extension is only supported in client mode, and is activated by passing the *server_hostname* argument to `:meth:'ssl.SSLContext.wrap_socket'`.

System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 3.2.rst, line 1650); [backlink](#)

Unknown interpreted text role "mod".

System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 3.2.rst, line 1650); [backlink](#)

Unknown interpreted text role "meth".

- Various options have been added to the `:mod:'ssl'` module, such as `:data:'~ssl.OP_NO_SSLv2'` which disables the insecure and obsolete SSLv2 protocol.

System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 3.2.rst, line 1656); [backlink](#)

Unknown interpreted text role "mod".

System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 3.2.rst, line 1656); [backlink](#)

Unknown interpreted text role "data".

- The extension now loads all the OpenSSL ciphers and digest algorithms. If some SSL certificates cannot be verified, they are reported as an "unknown algorithm" error.
- The version of OpenSSL being used is now accessible using the module attributes `:data:'ssl.OPENSSL_VERSION'` (a string), `:data:'ssl.OPENSSL_VERSION_INFO'` (a 5-tuple), and `:data:'ssl.OPENSSL_VERSION_NUMBER'` (an integer).

System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 3.2.rst, line 1664); [backlink](#)

System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 3.2.rst, line 1730); [backlink](#)

Unknown interpreted text role "issue".

unittest

The `unittest` module has a number of improvements supporting test discovery for packages, easier experimentation at the interactive prompt, new testcase methods, improved diagnostic messages for test failures, and better method names.

- The command-line call `python -m unittest` can now accept file paths instead of module names for running specific tests (*issue* '10620'). The new test discovery can find tests within packages, locating any test importable from the top-level directory. The top-level directory can be specified with the `-t` option, a pattern for matching files with `-p`, and a directory to start discovery with `-s`:

System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 3.2.rst, line 1743); [backlink](#)

Unknown interpreted text role "issue".

```
$ python -m unittest discover -s my_proj_dir -p _test.py
```

(Contributed by Michael Foord.)

- Experimentation at the interactive prompt is now easier because the `.class:unittest.case.TestCase` class can now be instantiated without arguments:

System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 3.2.rst, line 1756); [backlink](#)

Unknown interpreted text role "class".

```
>>> from unittest import TestCase
>>> TestCase().assertEqual(pow(2, 3), 8)
```

(Contributed by Michael Foord.)

- The `.mod:unittest` module has two new methods, `.meth:~unittest.TestCase.assertWarns` and `.meth:~unittest.TestCase.assertWarnsRegex` to verify that a given warning type is triggered by the code under test:

System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 3.2.rst, line 1765);

Unknown interpreted text role "meth".

```
def test_anagram(self):  
    self.assertCountEqual('algorithm', 'logarithm')
```

(Contributed by Raymond Hettinger.)

- A principal feature of the unittest module is an effort to produce meaningful diagnostics when a test fails. When possible, the failure is recorded along with a diff of the output. This is especially helpful for analyzing log files of failed test runs. However, since diffs can sometime be voluminous, there is a new `attr:~unittest.TestCase.maxDiff` attribute that sets maximum length of diffs displayed.

System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 3.2.rst, line 1785);
[backlink](#)

Unknown interpreted text role "attr".

- In addition, the method names in the module have undergone a number of clean-ups.

For example, `meth:~unittest.TestCase.assertRegex` is the new name for `meth:~unittest.TestCase.assertRegexpMatches` which was misnamed because the test uses `:func:re.search`, not `:func:re.match`. Other methods using regular expressions are now named using short form "Regex" in preference to "Regexp" -- this matches the names used in other unittest implementations, matches Python's old name for the `mod:re` module, and it has unambiguous camel-casing.

- The `meth:~unittest.TestCase.assertDictContainsSubset` method was deprecated because it was misimplemented with the arguments in the wrong order. This created hard-to-debug optical illusions where tests like `TestCase().assertDictContainsSubset({'a':1, 'b':2}, {'a':1})` would fail.

System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 3.2.rst, line 1823); backlink Unknown interpreted text role "meth".

(Contributed by Raymond Hettinger.)

random

The integer methods in the `mod: random` module now do a better job of producing uniform distributions. Previously, they computed selections with `int(n*random())` which had a slight bias whenever n was not a power of two. Now, multiple selections are made from a range up to the next power of two and a selection is kept only when it falls within the range $0 \leq x < n$. The functions and methods affected are `func:~random.randrange`, `func:~random.randint`, `func:~random.choice`, `func:~random.shuffle` and `func:~random.sample`.

Unknown interpreted text role "func".

System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 3.2.rst, line 1937); [backlink](#)

Unknown interpreted text role "func".

```
>>> import dis, random
>>> dis.show_code(random.choice)
Name: choice
Filename: /Library/Frameworks/Python.framework/Versions/3.2/lib/python3.2/random.py
Argument count: 2
Kw-only arguments: 0
Number of locals: 3
Stack size: 11
Flags: OPTIMIZED, NEWLOCALS, NOFREE
Constants:
  0: 'Choose a random element from a non-empty sequence.'
  1: 'Cannot choose from an empty sequence'
Names:
  0: _randbelow
  1: len
  2: ValueError
  3: IndexError
Variable names:
  0: self
  1: seq
  2: i
```

In addition, the `:func:~dis.dis` function now accepts string arguments so that the common idiom `dis(compile(s, '', 'eval'))` can be shortened to `dis(s)`:

System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\cpython-main [Doc] [whatsnew] 3.2.rst, line 1964); [backlink](#)

(Moved out of Distutils by Tarek Ziadé.)

pdb

The `:mod: pdb` debugger module gained a number of usability improvements:

System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 3.2.rst, line 2110); [backlink](#)

Unknown interpreted text role "mod".

- `:file: pdb.py` now has a `-c` option that executes commands as given in a `:file: pdbrc` script file.

System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 3.2.rst, line 2112); [backlink](#)

Unknown interpreted text role "file".

System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 3.2.rst, line 2112); [backlink](#)

Unknown interpreted text role "file".

- A `.pdbrc` script file can contain `continue` and `next` commands that continue debugging.

System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 3.2.rst, line 2114); [backlink](#)
Unknown interpreted text role "file".

- The `class: Pdb` class constructor now accepts a `nosigint` argument.

System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 3.2.rst, line 2116); [backlink](#)
Unknown interpreted text role "class".

- New commands: `l (list)`, `ll (long list)` and `source` for listing source code.
- New commands: `display` and `undisplay` for showing or hiding the value of an expression if it has changed.
- New command: `interact` for starting an interactive interpreter containing the global and local names found in the current scope.
- Breakpoints can be cleared by breakpoint number.

(Contributed by Georg Brandl, Antonio Cuni and Ilya Sandler.)

configparser

The `mod: configparser` module was modified to improve usability and predictability of the default parser and its supported INI syntax. The old `class: ConfigParser` class was removed in favor of `class: SafeConfigParser` which has in turn been renamed to `class: ~configparser.ConfigParser`. Support for inline comments is now turned off by default and section or option duplicates are not allowed in a single configuration source.

System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 3.2.rst, line 2130); [backlink](#)
Unknown interpreted text role "mod".

System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 3.2.rst, line 2130); [backlink](#)
Unknown interpreted text role "class".

System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 3.2.rst, line 2130); [backlink](#)
Unknown interpreted text role "class".

System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 3.2.rst, line 2130); [backlink](#)
Unknown interpreted text role "class".

Config parsers gained a new API based on the mapping protocol:

```
>>> parser = ConfigParser()
>>> parser.read_string("""
... [DEFAULT]
... location = upper left
... visible = yes
... editable = no
... color = blue
...
... [main]
... title = Main Menu
... color = green
...
... [options]
... title = Options
... """)
>>> parser['main']['color']
'green'
>>> parser['main']['editable']
'no'
>>> section = parser['options']
>>> section['title']
'Options'
>>> section['title'] = 'Options (editable: %(editable)s)'
>>> section['title']
'Options (editable: no)'
```

The new API is implemented on top of the classical API, so custom parser subclasses should be able to use it without modifications.

The INI file structure accepted by config parsers can now be customized. Users can specify alternative option/value delimiters and comment prefixes, change the name of the *DEFAULT* section or switch the interpolation syntax.

There is support for pluggable interpolation including an additional interpolation handler `:class:`~configparser.ExtendedInterpolation``:

System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\cpython-main [Doc] [whatsnew] 3.2.rst, line 2172); [backlink](#)

Unknown interpreted text role "class".

```
>>> parser = ConfigParser(interpolation=ExtendedInterpolation())
>>> parser.read_dict({'buildout': {'directory': '/home/ambv/zope9'},
...                  'custom': {'prefix': '/usr/local'}})
>>> parser.read_string("""
... [buildout]
... parts =
...     zope9
...     instance
... find-links =
...     ${buildout:directory}/downloads/dist
...
... [zope9]
... recipe = plone.recipe.zope9install
... location = /opt/zope
...
... [instance]
... recipe = plone.recipe.zope9instance
... zope9-location = ${zope9:location}
... zope9-conf = ${custom:prefix}/etc/zope.conf
... """)
>>> parser['buildout']['find-links']
'\n/home/ambv/zope9/downloads/dist'
>>> parser['instance']['zope9-conf']
'/usr/local/etc/zope.conf'
>>> instance = parser['instance']
>>> instance['zope9-conf']
'/usr/local/etc/zope.conf'
>>> instance['zope9-location']
'/opt/zope'
```

A number of smaller features were also introduced, like support for specifying encoding in read operations, specifying fallback values for get-functions, or reading directly from dictionaries and strings.

(All changes contributed by Łukasz Langa.)

urllib.parse

A number of usability improvements were made for the `:mod:`~urllib.parse`` module.

System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\cpython-main [Doc] [whatsnew] 3.2.rst, line 2216); [backlink](#)

Unknown interpreted text role "mod".

The `:func:`~urllib.parse.urlparse`` function now supports IPv6 addresses as described in RFC 2732:

System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\cpython-main [Doc] [whatsnew] 3.2.rst, line 2218); [backlink](#)

Unknown interpreted text role "func".

```
>>> import urllib.parse
>>> urllib.parse.urlparse('http://[dead:beef:cafe:5417:affe:8FA3:deaf:feed]/foo/') # doctest: +NORMALIZE_WHITESPACE
ParseResult(scheme='http',
            netloc='[dead:beef:cafe:5417:affe:8FA3:deaf:feed]',
            path='/foo/',
            params='',
            query='',
            fragment='')
>>>
```

The `:func:`~urllib.parse.urldefrag`` function now returns a `term` named tuple:

System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\cpython-main [Doc] [whatsnew] 3.2.rst, line 2230); [backlink](#)

Unknown interpreted text role "func".

System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\cpython-main [Doc] [whatsnew] 3.2.rst, line 2230); [backlink](#)

Unknown interpreted text role "term".

```
>>> r = urllib.parse.urldefrag('http://python.org/about/#target')
>>> r
DefragResult(url='http://python.org/about/', fragment='target')
```

```
>>> r[0]
'http://python.org/about/'
>>> r.fragment
'target'
```

And, the `func:~urllib.parse.urlencode` function is now much more flexible, accepting either a string or bytes type for the *query* argument. If it is a string, then the *safe*, *encoding*, and *error* parameters are sent to `func:~urllib.parse.quote_plus` for encoding:

System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\cpython-main [Doc] [whatsnew] 3.2.rst, line 2240); [backlink](#)

Unknown interpreted text role "func".

System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\cpython-main [Doc] [whatsnew] 3.2.rst, line 2240); [backlink](#)

Unknown interpreted text role "func".

```
>>> urllib.parse.urlencode([
...     ('type', 'telenovela'),
...     ('name', '¿Dónde Está Elisa?'),
...     encoding='latin-1')
'type=telenovela&name=%BFD%F3nde+Est%E1+Elisa%3F'
```

As detailed in `ref:parsing-ascii-encoded-bytes`, all the `mod:urllib.parse` functions now accept ASCII-encoded byte strings as input, so long as they are not mixed with regular strings. If ASCII-encoded byte strings are given as parameters, the return types will also be an ASCII-encoded byte strings:

System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\cpython-main [Doc] [whatsnew] 3.2.rst, line 2251); [backlink](#)

Unknown interpreted text role "ref".

Unknown interpreted text role "issue".

mailbox

Thanks to a concerted effort by R. David Murray, the `mod:mailbox` module has been fixed for Python 3.2. The challenge was that `mailbox` had been originally designed with a text interface, but email messages are best represented with `class:bytes` because various parts of a message may have different encodings.

System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\cpython-main [Doc] [whatsnew] 3.2.rst, line 2266); [backlink](#)

Unknown interpreted text role "mod".

System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\cpython-main [Doc] [whatsnew] 3.2.rst, line 2266); [backlink](#)

Unknown interpreted text role "class".

The solution harnessed the `mod:email` package's binary support for parsing arbitrary email messages. In addition, the solution required a number of API changes.

System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\cpython-main [Doc] [whatsnew] 3.2.rst, line 2271); [backlink](#)

Unknown interpreted text role "mod".

As expected, the `meth:~mailbox.Mailbox.add` method for `class:~mailbox.Mailbox` objects now accepts binary input.

System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\cpython-main [Doc] [whatsnew] 3.2.rst, line 2275); [backlink](#)

Unknown interpreted text role "meth".

System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\cpython-main [Doc] [whatsnew] 3.2.rst, line 2275); [backlink](#)

Unknown interpreted text role "class".

`class:~io.StringIO` and text file input are deprecated. Also, string input will fail early if non-ASCII characters are used. Previously it would fail when the email was processed in a later step.

System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\cpython-main [Doc] [whatsnew] 3.2.rst, line 2278); [backlink](#)

Unknown interpreted text role "class".

There is also support for binary output. The `meth:~mailbox.Mailbox.get_file` method now returns a file in the binary mode (where it used to incorrectly set the file to text-mode). There is also a new `meth:~mailbox.Mailbox.get_bytes` method that returns a `class:'bytes'` representation of a message corresponding to a given *key*.

System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\cpython-main [Doc] [whatsnew] 3.2.rst, line 2282); [backlink](#)

Unknown interpreted text role "meth".

System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\cpython-main [Doc] [whatsnew] 3.2.rst, line 2282); [backlink](#)

Unknown interpreted text role "meth".

System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\cpython-main [Doc] [whatsnew] 3.2.rst, line 2282); [backlink](#)

Unknown interpreted text role "class".

It is still possible to get non-binary output using the old API's `meth:~mailbox.Mailbox.get_string` method, but that approach is not very useful. Instead, it is best to extract messages from a `class:~mailbox.Message` object or to load them from binary input.

System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\cpython-main [Doc] [whatsnew] 3.2.rst, line 2288); [backlink](#)

Unknown interpreted text role "meth".

System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\cpython-main [Doc] [whatsnew] 3.2.rst, line 2288); [backlink](#)

Unknown interpreted text role "class".

(Contributed by R. David Murray, with efforts from Steffen Daode Nurpmeso and an initial patch by Victor Stinner in [issue:'9124'](#).)

System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\cpython-main [Doc] [whatsnew] 3.2.rst, line 2293); [backlink](#)

Unknown interpreted text role "issue".

turtledemo

The demonstration code for the `mod:turtle` module was moved from the *Demo* directory to main library. It includes over a dozen sample scripts with lively displays. Being on `attr:sys.path`, it can now be run directly from the command-line:

System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\cpython-main [Doc] [whatsnew] 3.2.rst, line 2299); [backlink](#)

Unknown interpreted text role "mod".

main\Doc\whatsnew\[cpython-main] [Doc] [whatsnew] 3.2.rst, line 2299); [backlink](#)

Unknown interpreted text role "attr".

```
$ python -m turtledemo
```

(Moved from the Demo directory by Alexander Belopolsky in [:issue:'10199'](#).)

System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\[cpython-main] [Doc] [whatsnew] 3.2.rst, line 2308); [backlink](#)

Unknown interpreted text role "issue".

Multi-threading

- The mechanism for serializing execution of concurrently running Python threads (generally known as the `term`'GIL' or Global Interpreter Lock) has been rewritten. Among the objectives were more predictable switching intervals and reduced overhead due to lock contention and the number of ensuing system calls. The notion of a "check interval" to allow thread switches has been abandoned and replaced by an absolute duration expressed in seconds. This parameter is tunable through `func`'`sys.setswitchinterval()`'. It currently defaults to 5 milliseconds.

System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\[cpython-main] [Doc] [whatsnew] 3.2.rst, line 2313); [backlink](#)

Unknown interpreted text role "term".

Unknown interpreted text role "func".

Additional details about the implementation can be read from a [python-dev mailing-list message](#) (however, "priority requests" as exposed in this message have not been kept for inclusion).

(Contributed by Antoine Pitrou.)

- Regular and recursive locks now accept an optional *timeout* argument to their `meth`'`~threading.Lock.acquire`' method. (Contributed by Antoine Pitrou; [:issue:'7316'](#).)

System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\[cpython-main] [Doc] [whatsnew] 3.2.rst, line 2330); [backlink](#)

Unknown interpreted text role "meth".

System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\[cpython-main] [Doc] [whatsnew] 3.2.rst, line 2330); [backlink](#)

Unknown interpreted text role "issue".

- Similarly, `meth`'`threading.Semaphore.acquire`' also gained a *timeout* argument. (Contributed by Torsten Landschoff; [:issue:'850728'](#).)

System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\[cpython-main] [Doc] [whatsnew] 3.2.rst, line 2334); [backlink](#)

Unknown interpreted text role "meth".

System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\[cpython-main] [Doc] [whatsnew] 3.2.rst, line 2334); [backlink](#)

Unknown interpreted text role "issue".

- Regular and recursive lock acquisitions can now be interrupted by signals on platforms using Pthreads. This means that Python programs that deadlock while acquiring locks can be successfully killed by repeatedly sending SIGINT to the process (by pressing `kbd`'`Ctrl+C`' in most shells). (Contributed by Reid Kleckner; [:issue:'8844'](#).)

System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\[cpython-main] [Doc] [whatsnew] 3.2.rst, line 2337); [backlink](#)

System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 3.2.rst, line 2337); [backlink](#)

Unknown interpreted text role "issue".

Optimizations

A number of small performance enhancements have been added:

- Python's peephole optimizer now recognizes patterns such `x in {1, 2, 3}` as being a test for membership in a set of constants. The optimizer recasts the `class: 'set'` as a `class: 'frozenset'` and stores the pre-built constant.

System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 3.2.rst, line 2349); [backlink](#)

Unknown interpreted text role "class".

System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 3.2.rst, line 2349); [backlink](#)

Unknown interpreted text role "class".

Now that the speed penalty is gone, it is practical to start writing membership tests using set-notation. This style is both semantically clear and operationally fast:

```
extension = name.rpartition('.')[2]
if extension in {'xml', 'html', 'xhtml', 'css'}:
    handle(name)
```

(Patch and additional tests contributed by Dave Malcolin; [issue: '6690'](#)).

System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 3.2.rst, line 2361); [backlink](#)

Unknown interpreted text role "issue".

- Serializing and unserializing data using the `mod: 'pickle'` module is now several times faster.

System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 3.2.rst, line 2363); [backlink](#)

Unknown interpreted text role "mod".

(Contributed by Alexandre Vassalotti, Antoine Pitrou and the Unladen Swallow team in [issue: '9410'](#) and [issue: '3873'](#).)

System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 3.2.rst, line 2366); [backlink](#)

System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 3.2.rst, line 2366); [backlink](#)

Unknown interpreted text role "issue".

- The [Timsort algorithm](#) used in `meth: 'list.sort'` and `func: 'sorted'` now runs faster and uses less memory when called with a `term: 'key function'`. Previously, every element of a list was wrapped with a temporary object that remembered the key value associated with each element. Now, two arrays of keys and values are sorted in parallel. This saves the memory consumed by the sort wrappers, and it saves time lost to delegating comparisons.

System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 3.2.rst, line 2369); [backlink](#)

Unicode

Python has been updated to [Unicode 6.0.0](#). The update to the standard adds over 2,000 new characters including [emoji](#) symbols which are important for mobile phones.

In addition, the updated standard has altered the character properties for two Kannada characters (U+0CF1, U+0CF2) and one New Tai Lue numeric character (U+19DA), making the former eligible for use in identifiers while disqualifying the latter. For more information, see [Unicode Character Database Changes](#).

Codecs

Support was added for *cp720* Arabic DOS encoding (:issue:`1616979`).

System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 3.2.rst, line 2434); [backlink](#)

Unknown interpreted text role "issue".

MBCS encoding no longer ignores the error handler argument. In the default strict mode, it raises an `:exc:`UnicodeDecodeError`` when it encounters an undecodable byte sequence and an `:exc:`UnicodeEncodeError`` for an unencodable character.

System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 3.2.rst, line 2436); [backlink](#)

Unknown interpreted text role "exc".

System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-

Unknown interpreted text role "exc".

The MBCS codec supports 'strict' and 'ignore' error handlers for decoding, and 'strict' and 'replace' for encoding.

To emulate Python3.1 MBCS encoding, select the 'ignore' handler for decoding and the 'replace' handler for encoding.

On Mac OS X, Python decodes command line arguments with 'utf-8' rather than the locale encoding.

By default, `mod:'tarfile'` uses 'utf-8' encoding on Windows (instead of 'mbcs') and the 'surrogateescape' error handler on all operating systems.

System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\[cpython-main] [Doc] [whatsnew] 3.2.rst, line 2450); [backlink](#)

Unknown interpreted text role "mod".

Documentation

The documentation continues to be improved.

- A table of quick links has been added to the top of lengthy sections such as `ref:'built-in-funcs'`. In the case of `mod:'itertools'`, the links are accompanied by tables of cheatsheet-style summaries to provide an overview and memory jog without having to read all of the docs.

System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\[cpython-main] [Doc] [whatsnew] 3.2.rst, line 2460); [backlink](#)

Unknown interpreted text role "ref".

System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\[cpython-main] [Doc] [whatsnew] 3.2.rst, line 2460); [backlink](#)

Unknown interpreted text role "mod".

- In some cases, the pure Python source code can be a helpful adjunct to the documentation, so now many modules now feature quick links to the latest version of the source code. For example, the `mod:'functools'` module documentation has a quick link at the top labeled:

System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\[cpython-main] [Doc] [whatsnew] 3.2.rst, line 2465); [backlink](#)

Unknown interpreted text role "mod".

Source code `source:'Lib/functools.py'`.

System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\[cpython-main] [Doc] [whatsnew] 3.2.rst, line 2470); [backlink](#)

Unknown interpreted text role "source".

(Contributed by Raymond Hettinger; see [rationale](#).)

- The docs now contain more examples and recipes. In particular, `mod:'re'` module has an extensive section, `ref:'re-examples'`. Likewise, the `mod:'itertools'` module continues to be updated with new `ref:'itertools-recipes'`.

System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\[cpython-main] [Doc] [whatsnew] 3.2.rst, line 2475); [backlink](#)

Code Repository

In addition to the existing Subversion code repository at <http://svn.python.org> there is now a [Mercurial](https://hg.python.org/) repository at <https://hg.python.org/>.

After the 3.2 release, there are plans to switch to Mercurial as the primary repository. This distributed version control system should make it easier for members of the community to create and share external changesets. See [PEP 385](#) for details.

To learn to use the new version control system, see the [Quick Start](#) or the [Guide to Mercurial Workflows](#).

Build and C API Changes

Changes to Python's build process and to the C API include:

- The *idle*, *pydoc* and *2to3* scripts are now installed with a version-specific suffix on `make altinstall` ([issue: 10679](#)).

System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 3.2.rst, line 2527); [backlink](#)

Unknown interpreted text role "issue".

- The C functions that access the Unicode Database now accept and return characters from the full Unicode range, even on narrow unicode builds (Py_UNICODE_TOLOWER, Py_UNICODE_ISDECIMAL, and others). A visible difference in Python is that `func:'unicodedata.numeric'` now returns the correct value for large code points, and `func:'repr'` may consider more characters as printable.

System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 3.2.rst, line 2530); [backlink](#)

- Computed gotos are now enabled by default on supported compilers (which are detected by the configure script). They can still be disabled selectively by specifying `--without-computed-gotos`.

(Contributed by Antoine Pitrou; [issue: 9203](#).)

System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 3.2.rst, line 2543); [backlink](#)

Unknown interpreted text role "issue".

- The option `--with-wctype-functions` was removed. The built-in unicode database is now used for all functions.

(Contributed by Amaury Forgeot D'Arc; [issue: 9210](#).)

System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 3.2.rst, line 2548); [backlink](#)

Unknown interpreted text role "issue".

- Hash values are now values of a new type, `c:type:'Py_hash_t'`, which is defined to be the same size as a pointer. Previously they were of type long, which on some 64-bit operating systems is still only 32 bits long. As a result of this fix, `class:'set'` and `class:'dict'` can now hold more than 2^{32} entries on builds with 64-bit pointers (previously, they could grow to that size but their performance degraded catastrophically).

- Removed the `o?` format from the `PyArg_Parse` functions. The format is no longer used and it had never been documented ([:issue:8837](#)).

System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 3.2.rst, line 2590);
[backlink](#)

Unknown interpreted text role "issue".

There were a number of other small changes to the C-API. See the `source:Misc/NEWS` file for a complete list.

System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-

main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 3.2.rst, line 2593); [backlink](#)

Unknown interpreted text role "source".

Also, there were a number of updates to the Mac OS X build, see `:source: 'Mac/BuildScript/README.txt'` for details. For users running a 32/64-bit build, there is a known problem with the default Tcl/Tk on Mac OS X 10.6. Accordingly, we recommend installing an updated alternative such as [ActiveState Tcl/Tk 8.5.9](#). See <https://www.python.org/download/mac/tcltk/> for additional details.

System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 3.2.rst, line 2596); [backlink](#)

Unknown interpreted text role "source".

Porting to Python 3.2

This section lists previously described changes and other bugfixes that may require changes to your code:

- The `:mod: configparser` module has a number of clean-ups. The major change is to replace the old `:class: ConfigParser` class with long-standing preferred alternative `:class: SafeConfigParser`. In addition there are a number of smaller incompatibilities:

System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 3.2.rst, line 2609); [backlink](#)

Unknown interpreted text role "mod".

System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 3.2.rst, line 2609); [backlink](#)

Unknown interpreted text role "class".

System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 3.2.rst, line 2609); [backlink](#)

Unknown interpreted text role "class".

- The interpolation syntax is now validated on `:meth: ~configparser.ConfigParser.get` and `:meth: ~configparser.ConfigParser.set` operations. In the default interpolation scheme, only two tokens with percent signs are valid: `%(name)s` and `%%`, the latter being an escaped percent sign.

System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 3.2.rst, line 2614); [backlink](#)

Unknown interpreted text role "meth".

System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 3.2.rst, line 2614); [backlink](#)

Unknown interpreted text role "meth".

- The `:meth: ~configparser.ConfigParser.set` and `:meth: ~configparser.ConfigParser.add_section` methods now verify that values are actual strings. Formerly, unsupported types could be introduced unintentionally.

System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 3.2.rst, line 2620); [backlink](#)

Unknown interpreted text role "meth".

System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 3.2.rst, line 2620); [backlink](#)

Unknown interpreted text role "meth".

- Duplicate sections or options from a single source now raise either `:exc: ~configparser.DuplicateSectionError` or `:exc: ~configparser.DuplicateOptionError`. Formerly, duplicates would silently overwrite a previous entry.

System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 3.2.rst, line

2625); [backlink](#)

Unknown interpreted text role "exc".

System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 3.2.rst, line 2625); [backlink](#)

Unknown interpreted text role "exc".

- Inline comments are now disabled by default so now the ; character can be safely used in values.
 - Comments now can be indented. Consequently, for ; or # to appear at the start of a line in multiline values, it has to be interpolated. This keeps comment prefix characters in values from being mistaken as comments.
 - "" is now a valid value and is no longer automatically converted to an empty string. For empty strings, use "option =" in a line.
- The `:mod:`nntplib`` module was reworked extensively, meaning that its APIs are often incompatible with the 3.1 APIs.

System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 3.2.rst, line 2640); [backlink](#)

Unknown interpreted text role "mod".

- `:class:`bytearray`` objects can no longer be used as filenames; instead, they should be converted to `:class:`bytes``.

Unknown interpreted text role "issue".

- `PyArg_Parse*()` functions:
 - "#/" format has been removed: use "s#" or "s*" instead
 - "w" and "w#" formats has been removed: use "w*" instead

- The `:type:'PyCObject'` type, deprecated in 3.1, has been removed. To wrap opaque C pointers in Python objects, the `:type:'PyCapsule'` API should be used instead; the new type has a well-defined interface for passing typing safety information and a less complicated signature for calling a destructor.

System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\[cpython-main] [Doc] [whatsnew] 3.2.rst, line 2655); [backlink](#)

            outfile.write(line)
```

(Contributed by Georg Brandl and Mattias Brändström; [appspot issue 53094](#).)

- `:func:struct.pack` now only allows bytes for the `s` string pack code. Formerly, it would accept text arguments and implicitly encode them to bytes using UTF-8. This was problematic because it made assumptions about the correct encoding and because a variable-length encoding can fail when writing to fixed length segment of a structure.

System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 3.2.rst, line 2692); [backlink](#)
