## EventEmitter.removeAllListeners() method

Removes all listeners. If given an event argument, it will remove only listeners for that event.

**Signature:**

```
removeAllListeners(event?: EventType): EventEmitter;
```

### Parameters

| Parameter | Type                      | Description                        |
|-----------|---------------------------|------------------------------------|
| event     | <a href="#">EventType</a> | the event to remove listeners for. |

**Returns:**

[EventEmitter](#)

`this` to enable you to chain method calls.
