

npm-unstar

Synopsis

`npm unstar [<pkg>...]`

Note: This command is unaware of workspaces.

Description

“Unstarring” a package is the opposite of `npm star`, it removes an item from your list of favorite packages.

More

There’s also these extra commands to help you manage your favorite packages:

Star You can “star” a package using `npm star`

Listing stars You can see all your starred packages using `npm stars`

Configuration

registry

- Default: “https://registry.npmjs.org/”
- Type: URL

The base URL of the npm registry.

unicode

- Default: false on windows, true on mac/unix systems with a unicode locale, as defined by the `LC_ALL`, `LC_CTYPE`, or `LANG` environment variables.
- Type: Boolean

When set to true, npm uses unicode characters in the tree output. When false, it uses ascii characters instead of unicode glyphs.

otp

- Default: null
- Type: null or String

This is a one-time password from a two-factor authenticator. It's needed when publishing or changing package permissions with **npm access**.

If not set, and a registry response fails with a challenge for a one-time password, npm will prompt on the command line for one.
